i2i Stream has the ability to broadcast audio sound from any media source wirelessly

For further information, please visit www.i2igear.com.

Mountain View, CA, 20th January 2009: California company Aerielle Inc. developers of advanced wireless audio solutions today announces the i2i Stream, a wireless digital device that is the first to allow users to broadcast audio from media sources, such as iPods, computers, television/entertainment systems, audio books, musical instruments and gaming devices to earphones/headphones and speakers of their choice.

The i2i Stream is intended to elevate the experience of listening to audio, whilst being the easiest way to wirelessly stream CD quality sound from a vast array of media sources. It can send and receive music and other sound files within a 30-foot-plus radius using fitted transmitters on a 2.4GHz frequency, all without having to worry about wires, cables or loss of audio quality.

The ultra-compact gadget offers 7 different frequencies, which are colour coded for ease of use when broadcasting audio. Fully charged, the i2i Stream provides 7 hours of continuous use. Just plug one i2i Stream into a source, the other into a headset or set of speakers, and the audio is streamed instantly.

Art Cohen, President and CEO of Aerielle Inc. stated: "Consumers everywhere need an easy way to stream sound, whether it be in the home, office or on the go. Consumers can now greatly benefit from a versatile wireless solution that makes streaming audio files a breeze. The i2i Stream is the most portable and versatile wireless audio product in the world."

The i2i Stream works with all standard earphones/headphones and speakers, allowing consumers to listen wirelessly to any single audio source. The devices are a quick and easy way to stream sound to speakers located throughout the home, office and even whilst in the garden. Music enthusiasts can also use the i2i Stream to get their favourite Internet radio content off their desktops, iPods and MP3 devices as well as from a TV channel and onto the earphones/headphones and speakers of their choice.

i2i Stream features include:

- Broadcast and receive audio on up to seven channels
- Compatible with iPod/mp3 players, headphones, computers and entertainment systems
- Ultra-compact and portable design, for at home or on the go
- High-performance 2.4 GHz HD-audio sound
- Volume dial allows users to control audio levels, regardless of media player's settings
- Up to 7 hours of battery life on one charge

- end -

Pricing and Availability

The i2i Stream is available now for £68.51 inc VAT (pack of 2). Available from: www.i2igear.com or www.widget.com.
