Launches new Standard (SE) and Pro editions; includes chargeback capabilities, OS monitoring and third-party systems integration

Buffalo Grove, IL, February 17th, 2009 – Vizioncore Inc., the market leader in server virtualization management, today announced it has launched two new editions of its successful vFoglight product, the world's most popular virtualization monitoring solution. vFoglight is the only virtualization monitoring solution that helps administrators understand the complex relationships and interactions among all the components within a virtual infrastructure.

vFoglight	- SE	Pro
ESX Server Monitoring		- x x
Management Server	- x	x
Guest Process Investigation		- x x
Chargeback	-	x
Physical Operating System (OS) Monitoring		- x
High Availability (Management Server)	-	x
Federation	-	x
Third-Party Integration	-	x

- \$499/Socket - \$699/Socket

To provide customers with maximum flexibility, vFoglight is now offered in two editions – vFoglight Standard (SE) and vFoglight Pro. vFoglight SE provides all the necessary components to help organizations monitor the performance of their virtual infrastructures. vFoglight Pro includes all the features of vFoglight SE and adds advanced capabilities for Chargeback, Physical Operating System (OS) Monitoring, Third-Party Integration and more. The chart below outlines the key features of each edition:

“Understanding the performance of the virtual infrastructure is a complex challenge, and vFoglight provides the ideal solution to bring clarity and expertise to the most significant problems,” commented Chris Page, Director of Product Management at Vizioncore. “With the latest edition of vFoglight SE, and the newly introduced vFoglight Pro, administrators can view the entire infrastructure through detailed architectural representations and use out-of-the-box alerts and expert advice to diagnose root-cause problems affecting performance and availability. By offering two vFoglight editions, Vizioncore seek to give customers exactly what they need at a price point to match the key features offered. ”

vFoglight SE helps administrators better understand internal VM performance and determine if resources are being utilized efficiently. With vFoglight Pro, organizations can go beyond virtual server monitoring to extend visibility to physical server environments, send and receive alerts from third-party systems, and perform Chargeback. Combined, these features take visibility to an all new level and helps

organizations do more with less. Following this theme of providing value and ROI, Vizioncore is launching vFoglight Pro to the market at a special introductory price of \$499/socket until March 31, 2009.

“Being able to monitor the performance of the virtual infrastructure should be a priority for any organization, but particularly those with critical applications running within virtual machines. They must fully realize, and then mitigate, the risks posed by performance issues before arriving at a potentially disastrous situation,” continued Page. “Only vFoglight from Vizioncore provides the granularity needed to support mission-critical IT infrastructures, while providing the high-level 360 degree view.”

Both editions of vFoglight provide comprehensive capabilities for customization of dashboards, views, derived metrics and rules. Additionally, they contain built-in user/group and role security which can be linked to external LDAP resources such as Active Directory.

vFoglight SE and vFoglight Pro are operational right out-of-the-box. Available now, vFoglight SE and Pro editions support Windows Server 2000 (SP4) and Windows Server 2003 32/64 Bit Base OS (SP1/SP2) across VMware environments.
