Beat Communication will deliver informations on trends and case studies of social networking business we have experienced in the Japanese market and talk about the impact of social networking and how it is becoming the effective management platforms among Japanese companies.

In the Social Networking World Forum, the key players of social networking markets will deliver talks on various topics of social networking. These global brands and organizations integrate the social networking into their marketing strategies.

Improving customer relations, as the Coca-Cola Company introduces, provides profitable information for the brand to develop better products or services, which leads to the increase of their revenues. Using social media, as British Airways introduces, also creates more opportunities to engage customers and promotes their sales.

The demand of integrating social networking into the marketing strategies is increasing in U.K year by year according to the survey of BT Tradespace revealed on the 16th December 2008. The research tells us 15% of companies in U.K use the social networking sites for their brand promotion.

In the current economic climate, companies are required to minimize costs and maximize efficiency in their managements. The solutions with social networking definitely will increase opportunities to gain more revenue and improve communication within companies and the one with customers. Beat Communication will endeavor at promoting our business management solutions with social networking around the world.

In terms of the future of social networking, we need to look at the mobile social networking. The Mobile Social Networking Forum is also co-located with the Social Networking Forum, and a large number of participants are expected.
