

Jobs growth at TMD Technologies as business booms

Submitted by: Antimony Communications

Tuesday, 17 March 2009

Strong growth in orders at home and especially overseas has led to an expansion in employment at UK electronics company TMD Technologies. With almost 40 new jobs created in the last two months, the workforce now stands at just under 190 people.

Benefiting from many years of research and development, the West London SME (Small/Medium Enterprise) has become established as a world leader in the development and manufacture of radar transmitters, microwave amplifiers, microwave tubes and high voltage power supplies.

“By offering high reliability combined with unsurpassed performance, power and compactness, our products are becoming recognised worldwide as leaders in their field,” said Sales Director Graham Brown.

In the second half of 2008, the Queen’s Award winning company commissioned a new production area for electronics assembly, high voltage testing and environmental stress screening. This included a massive 40 000 litre liquid nitrogen tank to cool the stress chambers.

TMD Technologies was formed in a management buy out from THORN-EMI in 1995. Its products are used in civil and military radar systems as well as in satellite communications, electromagnetic compatibility testing and science laboratories.

Notes for editors

About TMD Technologies

TMD Technologies Ltd is one of the world’s leading designers and manufacturers of specialised transmitters for radar and EW applications, high voltage power supplies and microwave tubes. The multiple Queen’s Award winning company also produces a range of advanced commercial microwave amplifiers for EMC testing and scientific applications.

All the UK company’s operational activities are carried out at its West London premises, helping to ensure a smooth transition between development and production.
