Starter kit includes software, drivers' card reader and download tool

A new software application for reading and archiving digital tachograph data has been introduced by Novadata. Developed in Gemany by SCM Microsystems, the CHIPDRIVE software has been bundled with a vehicle unit download tool to provide a complete starter kit package, suitable for small fleets and owner operated vehicles.

Competitively priced at £245.00 the CHIPDRIVE Driver Card solution provides everything required to assist transport operators in meeting the requirements for digital tachograph legislation – specifically to download, view and store the drivers' card activity data for their fleet.

For individual drivers who need to view recorded data while on the road, the basic CHIPDRIVE driver card application is also available for £95.00p. This includes a card reader, enabling drivers to download their driving record onto a laptop for transfer to a memory stick or for sending by e-mail to the master records.

For passenger service vehicles and freight transportation companies seeking a total solution, the new CHIPDRIVE Manager solution provides additional functionality for analyzing driving, availability for work and rest times. This comprehensive package incorporates tools for highlighting faults and events, as well as compliance, reporting infringements, and driver's information and correspondence.

About Novadata www.novadata.co.uk
Novadata provides a one-stop shop for driver training and all the equipment and accessories associated with the legal operation of commercial and public service vehicles. The company is committed to sourcing a wide range of quality products, enabling customers to choose the most cost effective solution, matching their requirement.

About SCM Microsystems
