Tuesday, 21 April 2009

London – April 21, 2009 – For immediate release:

MEGA, the company that provides enterprise architecture (EA) and business process analysis (BPA) software solutions, will be exhibiting the 2009 version of its software for EA management at the Enterprise Architecture Conference Europe 2009 (EAC). Organised by IRM UK Strategic IT Training Ltd., the event will take place from June 8 - 10, 2009, at the Park Plaza Victoria Hotel, London.

The EAC event will be the first time MEGA Modeling Suite is seen at a public event in the United Kingdom. It was released globally by MEGA on April 6 this year and contains several new modules and many enhancements that will comprehensively support all dimensions of EA in private and public sector organisations. Its range of application includes business process optimisation, IT road-mapping and planning, IT systems design and data modelling.

Designed for ease-of-use that in turn supports the achievement of higher productivity and efficiency, MEGA Modeling Suite helps enterprise architects and related professionals manage the complexity of EA projects. Equally important, it enables them to support and execute the strategy of their business, and achieve desired goals and outcomes.

Brand new modules include MEGA IT Planning, which helps enterprises build and compare effective in-depth scenarios for IT system transformation; MEGA Process BPMN, a new module that supports the latest version of the Business Process Modeling Notation (BPMN), the recognised industry standard developed by the Object Management Group (OMG) for business process descriptions; and for the defense and security industry a new dedicated solution called MEGA Suite for DoDAF.

In addition, new platform administration features are provided to integrate the software with authentication systems, and offer support for repository storage in Oracle or MS SQL Server database management systems. A new Web Editor is included to extend real-time access to the enterprise repository by enabling access via a role-based Web front-end. Easily deployed, it enriches the MEGA Advisor Web portal with real-time write capability and allows occasional, mobile users and stakeholders to access self-explanatory reports and dashboards, and work collaboratively.

EA specialists from MEGA's consultancy services will be in attendance on the company's stand at EAC 2009, ready to demonstrate MEGA Modeling Suite and discuss issues visitors need to address in projects being considered, under way or well advanced.

ABOUT MEGA www.mega.com

MEGA provides enterprise architecture, business process analysis, and governance, risk, and compliance solutions, with 70,000 users worldwide. European customers include Allianz, AXA, British American Tobacco, Direct TV, LCL Le Crédit Lyonnais, Renault Nissan, Société Générale and Unicredit.
