GoldenGate Software Announces Support for the New HP BladeSystem Matrix, Enabling Increased Flexibility, Faster Time to Market and a Lower Total Cost

---

GoldenGate Reduces Overall Risk by Minimizing Application and System Downtime for Companies Migrating to the New HP BladeSystem

San Francisco, CA – April 21, 2009 - GoldenGate Software Inc., a leading provider of high availability and real-time data integration solutions, today announced support for the new HP BladeSystem Matrix. Customers can now take advantage of the new, high performance hardware to enable greater flexibility and lower total cost of ownership.

GoldenGate provides high availability solutions for heterogeneous databases, operating systems and hardware platforms including HP-UX 11i, Linux, HP NonStop, Tru64 and Open VMS and is committed to supporting the HP user community running critical applications across a wide range of industry sectors. GoldenGate offers customers greater flexibility with a zero downtime operations solution as they migrate to the new HP BladeSystem Matrix environment. With the GoldenGate bi-directional data synchronization capabilities, customers can now migrate their critical applications without any database outage.

Standardizing on a HP BladeSystem for mission critical applications offers customers a high performance, scalable and reliable infrastructure, and provides IT resources the tools to manage and maintain a single system that meets a variety of business needs. Using GoldenGate solutions, customers can achieve continuous business operations by deploying a live standby instance or architect an active-active configuration within the HP BladeSystem environment. Additionally, customers can integrate data in real-time across multiple applications running on a HP BladeSystem platform to provide users with the most up-to-date information for business reporting and analysis.

"GoldenGate continues to support its growing customer base which has deployed solutions on a number of different HP platforms over the past 14 years," said Tim Rathbun, executive vice president of marketing and product management, GoldenGate Software Inc. "We have already seen a number of existing customers deploy the new HP BladeSystem Matrix platform and we look forward to helping our mutual customers deploy existing and new applications and achieve faster time to market."

"Customers need to take advantage of the latest innovations in server technology in order to capitalize on performance gains, cost saving architectures and improved resource utilization," said Mark Potter, senior vice president and general manager, Insight Software and Blades, HP. "Working with GoldenGate Software, customers can migrate from costly legacy systems to the ground-breaking new BladeSystem Matrix without experiencing downtime. Together, the solutions offer the fastest way to migrate and then deploy technology infrastructure in the industry."

 As a member of HP's Developer & Solution Partner Program (DSPP) and Infrastructure Advantage Partner Program (IAPP), GoldenGate Software offers unique solutions for mission-critical systems on HP platforms, such as HP NonStop and HP-UX, as well as the new HP BladeSystem Matrix. Many HP customers also use GoldenGate solutions such as, Bank of America, Chase Paymentech, DIRECTV, Federated Investors, MGM

Mirage, Swedbank, US Bank and VocaLink, as well as many of the world's largest banks, financial institutions, healthcare providers, and retailers for application high availability and real-time data access for improved business intelligence.
