Atlanta Technology Achieves Gold

Atlanta Technology, IT virtualisation and corporate cloud computing specialist, today announced it has been awarded Microsoft Gold Certified Partner status. In order to obtain this accolade Atlanta achieved the Hosted Solutions Competency, which involved demonstrating expertise, experience and commitment in implementing technology solutions to match a business' exact needs. A series of detailed client testimonials were submitted, in addition to the team undertaking examinations to illustrate Atlanta's ability in deploying Microsoft SPLA licensing.

Becoming an elite business partner of Microsoft involves a number of specific requirements, of which the ability to demonstrate knowledge in the chosen Competency. The best way for Atlanta to illustrate this was to profile the hosted services it is currently providing to a broad range of businesses across varying sectors, including financial services, social housing and professional services.

Simon Kelson, managing director, Atlanta Technology said: "We are extremely proud to become a Microsoft Gold Partner; it is an excellent achievement and demonstrates our knowledge, skill and commitment to delivering professional hosted and corporate cloud services to businesses of all sizes. Not only that, a key requirement towards achieving the accreditation was to provide examples of our work in action. The client testimonials offered a clear breakdown of not only how we work with customers, but gave a true insight into the business benefits and cost savings they reap as a result."

All Microsoft partners must have at least one of Microsoft's 13 Competencies, all of which are renewed annually to ensure they are fully up to date with the latest information, skills and innovation in their chosen area.

About Atlanta Technology:

In 1996, the founders of Atlanta Technology began to build their business vision for managed services. Atlanta is a new breed of customer-focused IT Partner that combines high levels of technical expertise with an in-depth understanding of customer needs. Today Atlanta is a trusted IT partner offering strategic advice and scalable, cost-effective IT solutions to customers in small business and the small to medium enterprise. Atlanta has developed a compelling remote services offer that removes the burden of managing expensive in-house IT resources, allowing customers to focus on core business issues. The key competencies include: Corporate Cloud Computing; Hosted Disaster Recovery Services; Hosted Servers; and self-hosted Server & Storage Virtualisation. http://www.atlantatechnology.co.uk.
