

TeDeG and Corizon announce a business partnership for Germany, Austria and Switzerland

Submitted by: Prompt Communications Ltd

Tuesday, 21 July 2009

London / Düsseldorf, 21 July 2009. Corizon, a London based vendor of Enterprise Mashup Software, expands its market position in the German speaking region. With immediate effect the Düsseldorf based consulting and system integrator TeDeG will act as an official partner of the 2000 founded IT Specialist company, whose product portfolio is already being used by numerous clients worldwide.

Corizon is a pioneer in the field of Enterprise Mashups. Since 2000 its core team has been developing and deploying what today, is the Corizon Enterprise Mashup Platform. No other company had previously focused on this specialist business software.

"Corizon offers solutions and services which the local market so far does not offer, and which makes it possible to present numerous processes, originating from multiple different applications in a far more efficient and cost effective manner. Worldwide many customers already use Corizon to reorganize the confusion and redundancy of widely differing applications in new and better ways. We are convinced, that we can very quickly convince users of the revolutionary idea of Enterprise Mashups", comments Holger Haseney, Managing Director TeDeG GmbH.

The Solution – Enterprise Mashups with Corizon Software

The Corizon platform concept makes it possible to repackage components of existing applications as UI Services, and use these to build browser based composite applications (Enterprise Mashups). After a comprehensive analysis of the existing user processes, these re-usable building blocks created from existing applications, are used to construct integrated, fit for purpose, end user applications.

The Goal – User Process Simplification

To simplify the user process, a single consolidated application is created, resulting in:-

- The desktop having all the functionality and data which the various user groups need for their business processes
- A smaller number of tasks and functions, reducing training expenditures, data entry errors and escalation rates
- Complete control over the UI ensuring process uniformity
- Ease of reporting on UI utilization enable further optimization
- Multi-skilled employment and outsourcing becomes easier

Advantages of this solution

All users see exactly what they need for their task. This reduces Average Handling Time (AHT) significantly and the learning curve of staff is markedly reduced. User processes and the use of UI components enable easy in house customization. This results in lower training costs, data entry errors and escalation rates. The accelerated system upgrades cause less disruption to ongoing operations whilst

work flow can be greatly improved.

Background Information on TeDeG

TeDeG GmbH headquartered in Dusseldorf has offices in London, Frankfurt and Zella-Mehlis and operates two business units:

1. Business Development & Services for technology firms, mainly in e-services, e-CRM and e-security. Here, TeDeG offers a comprehensive range of services – from business start-ups, marketing activities etc. to individually adapted services.
2. The unit Leading Software Solutions of TeDeG realizes holistic software projects on a stand-alone basis or with partners like T-Systems, Infogix, KANA, Oracle or LivePerson.

For more information please visit the Company's website www.TeDeG.com. TeDeG and its employees consistently pursue a "Best of Breed"-philosophy and therefore cooperate only with the leading ISVs in the respective product area.

Background information on Corizon

Corizon, the Enterprise Mashup Company, transforms the economics of owning business applications.

Corizon enterprise mashups simplify and automate the streamlining of the desktop enabling people to work more productively. The mashup platform achieves this by seamlessly combining the useful bits of business applications, giving the users the right information at the right time, to do their jobs better. The Corizon approach delivers pragmatic and fast project payback by addressing critical pain point's one process at a time.

Corizon is headquartered in London, UK, and works with leading systems integrators and technology partners across Europe including Oracle, Accenture, Cap Gemini, Sabio and Logica. Corizon's customers, from multiple industry sectors, seek to deliver fast project payback and improve their customer experience delivery and include BT, KPN, Student Loans Company (SLC) and HomeServe.
