

Get World Leading Logistics Management Software – Without Breaking the Bank

Submitted by: NetworkedWorld

Monday, 27 July 2009

You don't need to break the bank to acquire world class logistics software. There is agreement among logisticians that in spite of the recession it is time to invest in logistics systems in order to be in a good state to face a difficult future. But it is essential to have world class systems if you want to have a world class supply chain.

CarrierNetOnline (CNO), the multiple award winning logistics planning software from Deltion(<http://www.deltion.co.uk>) continues to lead in offering rich functionality, in-depth features, 24 x 7 access and ease of use. The most recent developments of CNO include:

- New and more user friendly GUI (graphic user interface)
- Full use of Google Maps and Google Satellite Maps
- Routes and trips can now be created either manually, using drag and drop and maps, OR fully automated with order interface from another system (e.g. order processing, ERP, WMS).
- Live order/vehicle location on screen on Google maps and constantly updating progress screen.
- POD status available via the users web site

Piyush Shah, CEO of Deltion, said: "There is no capital expenditure with the CNO pay-as-you-use Cloud Computing model, and you can be up and running in weeks. Because of the rapid return on investment of CNO, companies will have a world class transport and logistics system which pays for itself in a very short time".

Deltion is a world leader in Cloud Computing and Software as a Service (SaaS) applications. CarrierNetOnline (CNO) has been recognised internationally as the leading web based application for supply chain, logistics and transport management.

The success of CNO is based on more than 20 years of experience developing solutions for logistics and transport operations. Deltion's management team developed CNO as the first web based SaaS solution in order to provide a world class real-time software service for manufacturers, retailers and logistics and transport companies - in fact any organisation with the need to manage and control both in-house and outsourced and sub-contracted logistics in real time.

Deltion set the goal of providing managers of any logistics operation with a real time Anyone, Anywhere, Anytime solution which would enhance efficiency and service levels while reducing operating costs. The Deltion cost model charges on a transaction basis - pay only for what you do and what you need today, not what you once needed or might need tomorrow. This is revolutionary by any standard and has earned CNO several awards.
