---

The Blower range of lightweight aluminium radiators from MHS is the essence of elegance and the embodiment of simplicity.

Blower's slender appearance is designed to provide practical and modern heating, allowing exceptionally efficient heat transfer to the room, as well as looking beautiful.

Aluminum radiators, like Blower, are lightweight, ensuring easy one person wall-mounting – with low water content, making them ideal for use with heat pumps – and they can deliver a greater heat output than their equivalent sized steel or chrome counterparts. Plus, for eco-conscious consumers, aluminum has the benefit of being able to be recycled indefinitely as reprocessing doesn't damage its structure. So Blower can be recycled at the end of its life, reducing its impact on the environment.

Available in stunning textured white or anthracite finish, Blower radiators combine a gently furrowed exterior with a sharp, chic contemporary design to suit a range of tastes and interior designs.

Ideal for creating a design statement, Blower has five different widths (340, 425, 510, 595 and 680mm) with a height of 1,800mm, and is available with outputs ranging from 1.1kW to 2.2kW.

Blower is part of MHS Radiators' popular and extensive collection of ultramodern, modern and traditional radiators and towel rails. Priced from £472 + VAT, Blower is available through the extensive UK network of MHS Radiator Display Centres – for details visit [www.mhsradiators.com](http://www.mhsradiators.com)
