---

Weatherproofing Advisors Ltd, a leading UK roofing contractor in commercial roofing (<http://www.weatherproofing.co.uk>), has recently seen their new roof management system REALM® surpass 300 clients.

REALM®, which stands for Roofplan Estate Asset Lifecycle Management, is a new approach to managing roofs in the digital age. All data concerning the proper maintenance of the roof including survey reports, roof condition index, and CAD drawings are managed through a secure online portal which clients have access to at all times. Weatherproofing believe the system will help their clients save money and get maximum performance from their property portfolios.

Weatherproofing's Managing Director John Kelly shares:

"We have always strived to be a forward thinking company and we consider it especially vital with the tough economic times we find ourselves in. The best way to predict the future is to create it, and that is exactly what we hope to achieve through REALM®."

As the construction industry feels the full impact of the slow economic recovery it is the companies who are seeking out new and cost effective methods of servicing their clients who are continuing to prosper. Despite difficult conditions Weatherproofing Advisors can definitely be considered one of the roofing contractors (<http://www.weatherproofing.co.uk>) who are pushing the envelope.

Weatherproofing Advisors have been in business since 1987 focusing mainly on industrial roofing (<http://www.weatherproofing.co.uk>) and have depots in Glasgow, Newcastle, St Helens and a new office in London with the ability to serve clients all over the UK. Clients who have thus far signed up for the REALM® management system include schools, shopping centres and large industrial complexes across the UK.
