Active Risk Incident Management enables organizations to integrate all types of incident and risk information cost effectively

Submitted by: PR Artistry Limited
Tuesday, 14 February 2012

Active Risk (http://www.activerisk.com) today announced the general availability of enhanced incident management capabilities in Active Risk Manager (http://www.activerisk.com) (ARM), its award winning Enterprise Risk Management (ERM) software. ARM now enables organizations to improve the tracking of incidents so they can become more proactive about prevention. Incidents and risks can now be collected and stored in a single, easy-to-use solution that can be linked with project, program and enterprise-wide risk information.

ARM Incident Management makes it simple for employees and appropriate supply chain partners to record all types of incidents, including workplace accidents and injuries, environmental incidents, quality issues, IT security violations and system downtime.

ARM Incident Management ensures that all incidents can be accurately and consistently captured following standardized processes. Incidents and related information such as investigations, responses and regulatory data are collected in the single ARM repository reducing the administrative burden and providing management visibility.

Darren Thorpe, Chief Technology Officer at Active Risk, commented, "ARM Incident Management not only records all types of incidents, but has been designed to do this in a cost-effective way. This enables organizations to give every employee the capability to report incidents via web, intranet or mobile device. Managers can now see the complete picture for the first time."

The insight provided by ARM Incident Management will help organizations identify where controls need tightening, set targets for incident reduction and monitor progress against these goals. Over time a knowledge base of effective controls, back-up plans and actions will be built up in ARM. This enables the sharing of best practices across the business to further reduce the number of incidents and minimize their impact.

ARM Incident Management is available now. For more information visit: www.activerisk.com.

About Active Risk

Active Risk (formerly Strategic Thought Group) (AIM:ARI) is the developer of Active Risk Manager which addresses enterprise risk management (ERM) and governance, risk and compliance (GRC) requirements with advanced software and services that can be implemented across organizations in all industry sectors.

Active Risk Manager (ARM) is the first web-based ERM software solution and is recognized as having the most extensive range of capabilities available today. ARM enables organizations to identify, analyse, control, monitor, improve and report on all risks and opportunities in the organization. It covers

project and portfolio risk, supply chain risk management, business continuity, controls management, reputational risk, health and safety, incident management, governance, compliance risks and more.

Active Risk has offices in the UK, USA and Australia, servicing customers worldwide directly and through a growing network of partners.
