

Super Cool and Energy Efficient - Opengate Switchair 2U from EDP Europe

Submitted by: Multimode Marketing

Wednesday, 22 February 2012

The Opengate Data Systems SwitchAir™ 2U

(<http://www.edpeurope.com/en/product/opengate/switchair-%E2%80%93-cooling-top-rack-network-switches>) helps users maintain a perfectly controlled environment for their network switches. This 2U rack mounted product ensures that up to two top-of-rack switches are able to receive the required cool air from outside the rack. This product can be installed in minutes whilst the network is still operational so there is no disruption. The SwitchAir™ works with switches that have side intake-rear exhaust, side intake-side exhaust and rear intake-front exhaust. There is a separate SwitchAir™ product available to cool a single switch having front (port) air intake. The device is powered by one single input cord which runs on any voltage and consumes only 15W of power. The product is backed by a 2 year warranty.

SwitchAir™ is available exclusively from EDP Europe Ltd and Lawrence Clark, Product Manager, of EDP Europe said "This is an ideal product for stabilising the switch intake air temperature to required levels. It's well designed, can be retro-fitted and ROI can be achieved in a matter of months. This product is proving very popular with our customers"

About EDP Europe & Opengate:

EDP Europe is a leading provider of Data Centre Infrastructure Products, Media Storage and Labelling solutions. For over 20 years, EDP Europe has provided high performance products from leading worldwide manufacturers, and has a proven track record in providing excellent customer support, in-house technical expertise and superior logistics across EMEA. This combination has ensured its continued growth in a highly competitive marketplace.

Opengate Data Systems is the Trusted Leader for Data Centre Infrastructure Solutions. Opengate delivers a comprehensive group of scalable solutions to maximize data centre utilisation and increase operational efficiency. Intelligent power, cooling and automation solutions allow the integration of critical infrastructure processes; reducing complexity, equipment capital and operating costs. Award winning Containment Cooling® and Unified Cooling® Systems deliver zero-waste data centre cooling based on real-time IT demand, increasing chiller plant performance and maximizing free cooling hours. Deploy More IT with Confidence™ and gain freedom to efficiently deploy medium to high-density computing anywhere on the IT floor and the ability to scale infrastructure support without disruption to the computing environment
