---

Defence company Cassidian is showcasing innovative radar technology that is able to detect, track and classify low flying objects such as drones, helicopters and missiles.

The TRML-3D radar is unique in that it is highly mobile and concentrates on the small, slow and low flying objects that are often difficult to detect.

The technology is currently in service with the armed forces in Lithuania, the Netherlands and Malaysia.

It is being demonstrated this week at the Black Sea Defence Aerospace Exhibition in Bucharest, Romania.

Cassidian has been developing technology in the field of medium range surveillance and target acquisition radars for both air and ground applications and TRML-3D is leading the way in this area of sensors that are used to enhance mission intelligence

Cassidian, one of the four pillars of EADS, presents a selection of its range of defence and security solutions at the Black Sea Defence Aerospace (BSDA).

Cassidian is a leading global provider of security solutions and integrated security systems for the civil and military markets, directly applicable to the defence & security needs of this important region.

Cassidian is developing the technologies of the future, drawing on its key competencies in aerospace, security, defence and services.

Cassidian will present its capabilities focused around its capabilities as a provider of fully integrated modular solutions to protect people, territories and manage the design, implementation and delivery of products and solutions.
