Providing bespoke product assembly services

IM Fabrication is a specialist company that provides product fabrication and assembly services to businesses.

Based in High Wycombe, IM Fabrication has been established to provide complementary services to those of its sister company, Interform Manufacturing.

While Interform Manufacturing specialises in making products using thermo-plastic forming techniques, IM Fabrication will focus on the assembly of products from flat plastic sheets, timber, wood and other materials.

Tim Spalton, Managing Director, explains “we have established IM Fabrication to extend the range of services that we can offer our customers. Traditionally, we have specialised in thermo vacuum formed plastic manufacturing but these days, we are also receiving an increasing number of enquiries from organisations, which are looking for assembly services. Through IM Fabrication, we will be using our extensive knowledge of product prototyping and manufacture to assemble products such as bespoke desks, boxes and units from a wide range of materials. It will be an excellent service for customers looking to fabricate both bespoke one-off items and those who need standard products put together at short notice.”
