---

Bristol based structural passive fire protection product specialists Complete Fire Protection Limited are seeking to raise awareness about the critical life saving importance of the use of intumescent products in commercial premises.

CFP Ltd stress that the wide range of effective fire retardant products available play an unsung role far beyond simply being used to comply with building regulations.

To highlight and promote intumescent material's vital role in helping to prevent human tragedy CFP are making a Free Guide available via their website [www.cfpltd.co.uk](http://www.cfpltd.co.uk) to help explain more about how intumescent products work and their safety applications.

CFP Ltd Manager Robyn Maggs says "We all expect to be safe from fire when we're at work or public buildings. Intumescent products are the vital behind the scenes, extra layer of protection that saves lives."

"With this Free Guide we hope people will understand more about the range and versatility of intumescent fire protection products and how they could be used beyond the minimum Building Regs requirement to keep us all safe" said Robyn.

Intumescent materials react to the heat of fires by expanding and producing a char which is a poor thermal conductor. Their inclusion in all pathways within buildings that a fire could use to spread provide a 'passive' layer of protection that stops flames, gasses and smoke from spreading between rooms and floors.

These passive structural fire protection (<http://www.cfpltd.co.uk>) elements are used in conjunction with the more visible and well known active and automatic fire protection systems such as alarms, sprinklers and extinguishers.

Intumescent fire protection products (<http://www.cfpltd.co.uk>) are available to stop the spread of fire smoke and gases through ventilation systems, electrical trunking, electrical sockets and switches, pipes, electric lights, doors and door frames, and a host of other areas. There are also intumescent paints, varnishes and coatings for a variety of surfaces.

To download the Free Guide go to <http://www.cfpltd.co.uk/> and click on the 'Free Book – Download Now' link. For more information about intumescent products call Robyn on 0117 971 1917 or visit <http://www.cfpltd.co.uk/> , or visit <http://www.cfpltd-shop.co.uk/>
