

Saniflo, turning a space you can't live with into one you can't live without

Submitted by: Consortium Communications

Tuesday, 14 August 2012

An ensuite bathroom? A shower cubicle in a loft extension or basement? Saniflo small-bore macerator pumping systems facilitate the addition of extra amenities almost anywhere.

The unobtrusive units are easy, quick and economic to install, enabling homeowners to overcome the limitations of gravity drained plumbing and maximize the potential of their home.

The market leading company has been at the forefront of small-bore technology for over thirty years and with over 1,000,000 products sold the company is justifiably proud of its track record.

Homeowners have benefitted from the added convenience and value of additional facilities including a new toilet under the stairs or in a garage, a basement or loft conversion, a cloakroom, shower room or bathroom - even a complete kitchen or utility room with dishwasher and washing machine.

Wherever extra facilities are needed Saniflo (<http://www.saniflo.co.uk>) has a product precisely designed to fill that need. All that is needed is a water and electric power supply.
