

Excel Launches Excel Encyclopaedia

Submitted by: Mayflex UK Limited

Monday, 3 September 2012

3rd September 2012, Excel Networking Solutions, the copper and optical cabling infrastructure provider, has launched the 2nd edition of the Excel Encyclopaedia.

The first version was published back in September 2010 and received much acclaim for its educational and factual content. The Encyclopaedia has been designed to provide consultants, M&E contractors, end users and installation partners with a thorough understanding of structured cabling and more importantly a complete insight into the Excel Structured Cabling Solution.

Tracey Calcutt, marketing manager commented "We're delighted with the new Excel Encyclopaedia, we've added even more technical content to this edition which includes more explanations, diagrams and quick reference charts that assist the reader to get a clearer understanding of structured cabling in general, as well as being the ultimate guide to the Excel structured cabling solution."

Tracey continued "A large majority of the Encyclopaedia has been written by key members of our team including two RCDD qualified technicians, one of which, Paul Cave is the Chairman of the BISCI Standards Committee, so the reader can be assured that they've got one trusted source of information written by the people that know what they're talking about."

Tracey concluded "The Excel Encyclopaedia is available in electronic format from the Excel website or on CD to allow recipients to copy and paste the relevant information for their requirements, particularly in the Pre-Sales Support section which provides ready-made specification document templates to assist with complex bids."

The Excel Encyclopaedia Edition 2 is available in English, French and Spanish. A copy can be downloaded from www.excel-networking.com and is coming soon in an iPad friendly version. Excel partners can also download word versions of the specification documents and tender responses by visiting the Excel Partner Area on the website.
