Sugar Foods Corporation (<http://www.sugarfoods.com/SFC/>), a USA multinational food products company has selected Real Status (<http://www.real-status.com/>)' Hyperglance (http://www.real-status.com/index.php?option=com_content&view=article&id=7&Itemid=122), the world's first real-time IT modelling and visualisation software to enable its IT department to visualise the relationships between applications and infrastructures.

Hyperglance provides a comprehensive 3D view of Sugar Foods' infrastructure, from end to end, allowing Head of IT and Network Administrator, Lewis Benton, and his team at the company to pinpoint the root cause of any performance issues, and trouble shoot any concerns quickly and effectively.

The company has multiple offices, manufacturing sites and distribution warehouses throughout the USA and Mexico. Lewis Benton explains, "By utilising Hyperglance we have been able to automatically discover and visualise a real-time 3D model of our IT infrastructure, both physical and virtual. The tool allows us to take a cross-section of every resource a business critical application uses, identify weak spots and fix them quickly."

Lewis continued, "The team at Real Status provided us with comprehensive training and support throughout and we have worked closely with the team to ensure we are benefiting effectively from the system."

Royce Murphy, CEO of UK-based Real Status said, "Hyperglance is a revolutionary solution that allows Sugar Foods to ensure their IT systems deliver the best possible services to the business. By cutting through the complexity of its IT systems and applications and aggregating the management data from all the different functions, Hyperglance stitches the information together. This provides context, and presents it as a highly detailed three-dimensional model that enables the customer to interrogate the relationships between applications and infrastructures."

About Real Status

Real Status (<http://www.real-status.com/>) is an IT infrastructure modelling and data visualisation software company, and our flagship product is Hyperglance. Hyperglance automatically builds three dimensional models showing the dependencies between IT applications and infrastructure. It aggregates and visualises performance and security data from existing IT management tools on the model in real-time.

Hyperglance enables CIOs, IT managers and their teams to see their management data and key dependencies in one place and at one time for thousands of connected devices. Their priorities and decisions are based on understanding the business impact of problems and proposed IT changes, which reduces risks, lowers costs, and improves capacity utilisation.

Real Status (<http://www.real-status.com/>) market is enterprises and managed service providers with virtualised and distributed computing environments. Real Status is based in Cambridge, UK and San Jose, California, USA.
