Solution uses combination of Anoto digital pens and BlackBerry smartphones to save time and money

London, UK, 17th September – Anoto, creator of digital pen (<http://www.anoto.com/>) and paper technologies and DevelopIQ, the mobile data capture specialist (<http://www.developiq.com/>), today announced that the Gwent Frailty Project (<http://www.gwentfrailty.torfaen.gov.uk/>) has won the Mobile Project of the Year award at the prestigious TechWorld Awards (<http://awards.techworld.com/>). The Gwent Frailty Project uses DevelopIQ's PaperIQ technology, which is based on Anoto's digital pen technologies and combines the use of BlackBerry smartphones. The Gwent Frailty Programme is ran by the Aneurin Bevan Health Board (ABHB) and has the potential to save over £600,000 per annum (<http://www.sourcewire.com/news/72162/aneurin-bevan-health-board-saves-600-000-with-digital-pen-and-paper?hilit=ABHB>).

Prior to the PaperIQ system, community carers would use paper forms for recording patient information, paper diaries to manage appointments and mobile phones for communicating when out in the community. The system deployed by DevelopIQ provides the ABHB and the community carers with a mobile data capture system that saves the carers around ten minutes per patient visit as well as significant reductions in travel costs as carers do not need to return to the office in between visits. The information is recorded into an electronic format on the Anoto digital pen and transmitted via a BlackBerry smartphone.

“The solution has been hugely popular among the carers within ABHB as they can record vital patient information and transmit it securely to the office,” says Robert Bakewell, CEO at DevelopIQ. “The PaperIQ solution is deployed across a number of healthcare organisations and has delivered significant benefits across the board and we are delighted to have been recognised by the judging panel at the TechWorld Awards for the second year running.”

The solution at the Gwent Frailty Project was also recognised as the runner-up in the high profile BlackBerry Global Wireless Achievement Awards (<http://www.blackberryworld.com/special-programs/waa>) in May. Last year, DevelopIQ won at the TechWorld Awards with its Mobile Project within the Portsmouth NHS Trusts' Maternity ward (<http://www.developiq.com/freeingtimetocare/>), where the solution has saved £220,000 per year.

About Develop IQ:

Founded in 2005, DevelopIQ Limited is an Elite Member of the BlackBerry Alliance Program focused on developing enterprise and consumer mobile applications for BlackBerry smartphones and BlackBerry PlayBook. The company also provides application development services on other mobile platforms, including Android and Apple's iOS. The award-winning PaperIQ data capture solution developed by the business is acknowledged as a leading digital pen solution for the BlackBerry platform. The business has a strong track record in the NHS as well as other public sector environments and has successfully delivered the largest digital pen deployment to date in the UK, which was to 4,000 users in the police service.

DevelopIQ is now listed in the UK's National Purchasing Framework for digital pens operated by Solent Supplies which enables public sector organisations to purchase Anoto technology without a lengthy and costly public tender.
