Leading supplier of cyber security solutions in GCC region to supply Becrypt (<http://www.becrypt.com>) Encryption, End Point Protection and Secure Remote Working solutions

London, UK, 10 October 2012 MISTDLP, a specialist in cyber security and data loss prevention has today announced that it is to resell Becrypt's Enterprise data security solutions. This will cover Becrypt's full range of data encryption products for desktop, laptop, and tablet PCs, its media encryption tools for protecting data in transit, its end point protection and authentication solutions, and its secure remote access solutions.

Chris Forgan, Business Development Director at MISTDLP stated; "In the Middle East we have seen a marked increase in the number of cyber attacks on major corporations, Government departments and wealthy individuals during recent years. Organisations have been attacked at various levels with zero day, social engineering and using standard hacking techniques such as SQL injection. By extending the MISTDLP portfolio to include the full range of Becrypt Enterprise security solutions, we are able to help our customers mitigate risk across a wider range of threats."

Becrypt supplies a full spectrum of award winning, innovative cyber security products designed to protect sensitive information throughout the organisation on the desktop, at the end point and when in transit or being shared with trusted third parties. Becrypt DISK Protect Foundation was the first product to be certified under CESG Commercial Product Assurance (CPA) scheme, and is suitable for protecting data up to Impact Level 3 (RESTRICTED) for public sector organisations and commercially sensitive data in the private sector. DISK Protect Foundation generates its own key material making it suitable for use in overseas markets where CESG key material would not normally be made available.

Bernard Parsons, CEO of Becrypt said; "After successful deployments of our Trusted Client secure remote working solution, I am delighted that MISTDLP is now to resell all of Becrypt's Enterprise products. Serious cyber attacks around the world are on the increase and it is paramount that organisations in both the public and commercial sectors take a strategic approach to the protection of their systems and data. Security conscious organisations are demanding end to end cyber security solutions that are easy to deploy, manage and use, that are robust enough to mitigate the risk of cyber attacks."
