Platinum level Enterprise Service Delivery Partner status and engineering certification for Bcrypt CPA solutions opens up new sectors for Centerprise

London, UK, 11 October 2012 Centerprise International, a major supplier to the Ministry of Defence in the provision of cyber security solutions has achieved certification from Bcrypt (<http://www.bcrypt.com>) for the installation of its CESG CPA (Commercial Product Assurance) approved solutions. The reseller has also become a Platinum level partner with Bcrypt, which will enable Centerprise to provide a wide range of professional services to Bcrypt users for its Enterprise products, including training, consultancy and software engineering services. The additional certification levels will enable Centerprise to broaden its target markets to include the wider government and public sector, and to provide more Cloud-based and Managed Service offerings.

Phil Boyes, Defence Business Manager at Centerprise said; "Centerprise is now able to supply the whole spectrum of Bcrypt products, which as well as encryption, includes end point protection and secure remote access. Historically we have focused on supplying solutions to the MOD and other Government departments typically where high grade encryption is required. The CPA and Enterprise certifications from Bcrypt will enable us to extend our customer-base to the wider public sector where lower levels of protection are more appropriate.

"In addition this will enable Centerprise to move to a more services-based business model – one which we are seeing a great demand for as more organisations require Cloud-based applications. These new certifications clearly demonstrate Centerprise's commitment to our partnership with Bcrypt and providing our customers with the best possible security solution."

Engineers at Centerprise participated in a partner education programme designed to ensure a thorough understanding of Bcrypt's latest range of products. The education programme also verifies that partners have a complete understanding of the application of Bcrypt products in different scenarios covering various Impact Levels, particularly when protecting Her Majesty's Government (HMG) information.

Bcrypt supplies a range of award winning, innovative cyber security products designed to protect sensitive information throughout an organisation; on the desktop, at the end point, when in transit or being shared with trusted third parties, and for ensuring secure remote access. Bcrypt's solutions are suitable for use by both commercial and public sector organisations.

Bernard Parsons, CEO of Bcrypt said; "At Bcrypt we are committed to developing ground-breaking security solutions to help our customers beat cyber crime in all its various forms. By extending our range of solutions our partners and resellers, such as Centerprise, are able to increase their business by tackling new markets where the demand for robust information assurance solutions is increasing."
