New colour A3 MFPs perfect for small offices

KYOCERA Document Solutions UK Limited unveils two new ECOSYS colour A3 MFPs – the FS-C8520MFP and the FS-C8525MFP. The reliable MFPs are very easy to install and maintain, making them ideal in areas where service staff are not immediately available, such as remote or highly secured locations. The FS-C8525MFP and the FS-C8520MFP offer great functionality for offices producing low print volumes and their small physical footprint is perfect where space is limited.

Advanced workflows that need more steps to be carried out are easy to customise and install with the newly integrated HyPAS* technology. Both MFPs benefit from this powerful and scalable solution platform that delivers easily customisable workflows. Apart from individual developments customers can use well known business applications to improve their business processes.

The easy to operate devices have wizard navigation to aid set-up and offer great usability for typical activities, such as 'scan to email', which significantly reduces user error and time spent carrying out jobs at the device.

Anup Rai, Product Manager at KYOCERA Document Solutions UK Limited said: "In today's economic climate our customers need professional A3 colour MFP functionality wherever they are. The affordably priced FS-C8525MFP and FS-C8520MFP are robust, easy to operate and simple to install – just add toner and power up. They have adopted the reliability of their predecessor's, KYOCERA's FS-C8020MFP and FS-C8025MFP devices, and the low purchase price for an A3 multifunctional combined with running costs similar to an A4 printer or MFP, give exceptional performance for low-volume, small office users. We've built on the success of our previous models with the integration of HyPAS to enable Java and Web based solutions to customise the device and improved ecology standards."

The FS-C8525MFP and the FS-C8520MFP are extremely energy conscious with a 20% lower TEC (Typical Energy Consumption) value than their predecessors. As with all Kyocera's ECOSYS products, they benefit from long-life drums and toner-only sustainable technology which ensure high reliability, longer maintenance cycles, low running costs and minimal waste. Kyocera has continuously developed its ECOSYS sustainable print technology which celebrates its 20th anniversary this year.
