

Ground breaking paperless technology will save NHS billions

Submitted by: Software Europe

Wednesday, 16 January 2013

Going paperless with GreenLight (<http://software-europe.com/products/greenlight>) online technology will save the NHS billions by removing time-wasting bottlenecks, lost paperwork and salary overpayments.

Software Europe (<http://www.software-europe.com>) is already supporting the NHS pledge for an information revolution with their paperless technology, GreenLight. NHS organisations are using GreenLight to remove archaic paper forms and requests such as managing changes in circumstances, starters and leavers, and additional hours. Modernising these three processes alone will save the NHS £150 million per year. GreenLight automates any paper-based process, eliminating lost paperwork, delays and errors, freeing time for NHS staff to spend on patient care.

Neil Everatt (<http://uk.linkedin.com/in/neileveratt>), Managing Director at Software Europe comments 'We have been working closely with the NHS for the last 6 years to revolutionise back office processes, working towards a paperless NHS. GreenLight is the next step to support the Health Secretary's pledge to save the NHS billions of pounds to put back into patient care.'

Software Europe also provides Expenses Health (<http://www.nhsexpenses.co.uk>), the leading online expenses management solutions to the NHS, with a rapidly growing customer base for both GreenLight (<http://software-europe.com/products/greenlight>) and Framework (<http://www.framework-software.com>), the online contract management solution. With a firm understanding of NHS requirements, Software Europe is helping the NHS to realise significant cost and time reductions which has already saved the NHS millions of pounds.
