New partnership agreement supports Becrypt's expansion to meet growing demand for encryption solutions in Far East

London, UK, 29 January, 2013 - Becrypt (http://www.becrypt.com), the market leading supplier of cyber security solutions to the UK Government, Ministry of Defence, public and commercial sectors has today announced a new partnership with IT Webster (http://www.itwebster.com), a technology company that focuses on distributing IT security solutions in Hong Kong and Greater China. IT Webster chose to partner with Becrypt for its proven encryption technology solutions to complement other security offerings in its portfolio including VPNs and authentication tokens from partners such as Ultra Electronics AEP and SecurEnvoy.

Bohlen Tong, Director at IT Webster said; "IT Webster focuses on having the right products for the market. We are seeing growth in the security market in Hong Kong and Greater China as customers look to data protection and compliance, having already implemented secure firewalls and system security. At the moment customers are deploying local solutions in Hong Kong that are heavily customised to meet their needs. The difference with Becrypt's products is that they have a robust, reliable technology pedigree, that has been proven across respected government, military and public sector organisations. We feel that both Trusted Client and DISK Protect are right for our market."

IT Webster currently works with over 200 resellers and will be a distributor for Becrypt's DISK Protect and Trusted Client. DISK Protect, a full disk encryption solution, is available in several different versions, including Windows 8, and is suitable for protecting data in commercial organisations. DISK Protect provides USB encryption, single sign-on options and it can be managed centrally using Becrypt Enterprise Manager, meaning that it can be deployed to 1000's of devices (desktops, laptops and tablets) in a matter of hours. Trusted Client is a self contained encrypted environment that allows employees to connect to an organisation's network and data (VPN) whilst preventing data loss and leakage.

Dr. Bernard Parsons, CEO at Becrypt commented; "We are delighted to be working with IT Webster in Hong Kong and the Greater China region. This is an important milestone in our continued growth and expansion into worldwide markets. IT Webster's strengths and expertise in data security technology will enable them to assist their resellers and customers to capitalise on the growing market opportunity in Asia."
