

Barnshaws supplies tighter bends to Park House development

Submitted by: Barnshaw Section Benders

Monday, 17 June 2013

Severfield Watson Structures have taken on a wonderful job- Park House development that required Barnshaws' bending expertise.

The development is set to be a spectacular eight-storey office space with only six internal columns, creating City-standard spaces, including two upper floors underneath the curved glass roof. This most sought-after commercial location will also include eleven retail units that feature shop fronts twice the average height for the area. In addition, there will be luxurious residential apartments with their own entrance.

As the company have provided excellent quality metal forming service to the contractors in the past and also Barnshaws have processed the bends tighter than competitors could offer, the bending experts were awarded the project straight away. Barnshaw Section Benders supplied the development with 138 pieces of various curving, largest of which were:

457x191x98 Universal Beam,
660x32 Circular Hollow Section,
305x305x97 Universal Column, and
450x250x16 Rectangular Hollow Section.

Barnshaws is known to offer exceptional service: tighter and better quality bends, faster than competitors, innovative and collaborative when it comes to getting invested in the project and advising clients on what is most effective. Barnshaw benders offer a variety of services that can be found at www.barnshaws.com.

To read more about Barnshaws latest projects please visit the news section (<http://www.barnshaws.com/blog/>).

Note to editors:

Established in 1969, Barnshaw Section Benders are based at six manufacturing sites around the UK, located in the West Midlands, Manchester and Hamilton, Scotland. Across these sites over 120 specialist machines are housed, and have provided steel bending services for some of the country's largest projects, including shopping centres, football stadiums, airports, and most recently the Olympics.
