

Flex Databases releases CRO Starter Kit™, an innovative CTMS platform for small and medium size contract research organisations

Submitted by: Flex Databases

Wednesday, 19 June 2013

St. Petersburg, Russian Federation, June 19, 2013. Flex Databases, a company specialising in clinical trial software, announced today the release of CRO Starter Kit™. The product, provided as web based Software as a Service (SaaS), requires minimum configuration. CRO Starter Kit™ offers a ready to use environment for any CRO looking for a product which can be deployed without a lengthy start-up period. Since the product is ready to be used out of the box, it can be cost effective even for CROs as small as 10 employees.

The combination of clinical trial expertise possessed by Flex Databases and a technology platform for rapid development allowed to create a product which is unique in the wealth of features it provides. CRO Starter Kit™ offers tools for managing HR information, a project catalogue, file storage repository/electronic Trial Master File (eTMF), highly advanced project management and budget control tools, site and investigator database, workflow management tool with a library of built-in workflows, timesheet engine and a system for SOP & Learning management - all for a simple monthly payment with no start-up costs.

'CRO Starter Kit™ turns a new page in the history of CTMS products', says Timur Galimov (<http://ru.linkedin.com/pub/timur-galimov/0/a44/33b>), Technical Director at Flex Databases. 'We worked hard to enable a small CRO to take full control over their eClinical technology solution while at the same time compressing decades of clinical trial expertise within Flex Databases into ready to use tools. This product levels the playing field between small and large companies'.

CRO Starter Kit™ will be available for booth demos at the DIA Meeting (<http://www.diahome.org/en/Flagship-Meetings/DIA2013/About-the-Conference.aspx>) in Boston, USA on June 24-26 2013 (booth #2022).

About Flex Databases

Flex Databases (www.flexdatabases.com) is a software & consulting company, with headquarters in St. Petersburg, Russia. Flex Databases built a platform for automation of business processes of CROs and pharmaceutical companies and delivers a full range of IT solutions required for a pharmaceutical business. Platform approach adopted by Flex Databases allows to eliminate manual re-entry of data, as information from each module of the system is shared across the platform. Some of the areas covered by Flex Databases are timesheets, project management, subject tracking in clinical trials, site payments, investigator and site management, budget tracking, HR records, expenses, SOPs and learning.
