

CM Group provides InfoSecure with HTML5 eLearning authoring tool

Submitted by: CM Group

Tuesday, 10 December 2013

CM Group has extended its HTML5 eLearning solutions offering into the European market in partnership with InfoSecure, the leading specialist Information Security Awareness Training company, based in the Netherlands.

CM Group has supplied InfoSecure with its rapid and collaborative eLearning authoring tool (<http://www.cm-group.co.uk/products/luminosity-studio>), Luminosity Studio. Using Luminosity Studio, InfoSecure produces high quality and engaging eLearning programs to increase employee awareness on information security and cyber security, compliance and business continuity management for organisations in more than 100 countries and approximately 40 languages.

By using Luminosity Studio, InfoSecure has been able to speed up the creation of large volumes of high quality HTML5 based eLearning courses with added benefits:

- Feature-rich content – courses that contain rich text, dynamic graphics, animations, audio, and video to provide an exciting and interactive learning experience.
- Customised branding – integration of an organisation's own branding to provide a familiar look and feel to the courses.
- Rapid translation into multiple languages - translation of XLIFF (XML Localisation Interchange File Format) output into multiple languages, quickly and easily. Improved and structured translation process used by InfoSecure on a weekly basis.

Tim Buff, CEO and Chief Learning Strategist at CM Group said, "We are delighted that InfoSecure selected Luminosity Studio as their eLearning authoring toolset. CM Group is a company that creates a lot of eLearning content itself, as well as providing organisations with authoring and delivery software and I have seen first-hand the benefits eLearning courses created using Luminosity Studio have brought to our customers."

About CM Group

CM Group specialises in the design and creation of advanced learning solutions for large international organisations. We offer comprehensive educational and technical consulting services centred around the use of technology to achieve great learning outcomes. Using our advanced collaborative, rapid authoring software, we are the largest creator of bespoke HTML5 based eLearning courses in the UK. Our proven, end-to-end mobile learning solutions include responsive HTML5 content for tablet and smartphone consumption, cloud based hosting and delivery via our mobile learning platform, and a range of BYOD Apps for offline consumption and tracking. Our clients include Microsoft, RBS, Virgin Trains, NHS, Three, MOD, BAE and many more leading organisations.

With offices in the UK and USA, CM Group is ideally placed to help clients with the full range of business and technical issues they face in harnessing the latest technologies to improve business performance through increased staff effectiveness.
