Princeton Softech Wins Award at SIGS Application Development 2000 Conference, London (19-23 June 2000): Component Manager Voted Best Component Library

Submitted by: Strategic Public Relations Ltd

Wednesday, 12 July 2000

Delegates at the SIGS Application Development 2000 conference voted Princeton Softech's Component Manager 'best component library'. The nomination is the latest addition to Princeton Softech's portfolio of award-winning products, that includes Select Enterprise for component based development and SyncPoint for data synchronisation. Princeton Softech is a subsidiary of Computer Horizons Corp. (Nasdaq:CHRZ) that delivers enabling technologies for enterprise-scale eBusiness solutions.

"eBusiness application development demands a new level of software quality delivered in shorter-than-ever timescales," commented Hedley Apperly, senior product marketing manager, Princeton Softech. "SIGS conference attendees are at the sharp edge of these pressures and they're the ones actually putting the latest technologies into practice. We are delighted to win their support with this award. It clearly demonstrates that Component Manager addresses the needs of eBusiness application developers pragmatically and effectively."

Princeton Softech's Component Manager maximises component design and component reuse by enabling developers to identify, manage and manipulate components for use in application development. Using Component Manager, developers can share components and designs across different repositories, development groups, companies and even across the Internet.

"We congratulate Princeton Softech on the recognition they have achieved with this award," said Jane Major, managing director, SIGS/101communications. "One of our aims at the event is to encourage useful interaction between vendors and users and the awards have proved a popular means for the delegates to voice their opinion."
