SONAR Making Waves in the Virtualisation Market

Submitted by: Xtravirt

Thursday, 2 October 2014

London, UK – 25th September 2014

Xtravirt, the Centre of Excellence and leading provider of cloud and virtualisation solutions, is soon to launch an exciting new innovation for virtual IT environments, code named SONAR. A highly engineered analytics tool with a lightweight footprint, SONAR rapidly gathers, assesses and reports on numerous elements across the virtual data centre and desktop.

Impressively, this potent software is capable of swiftly processing tens of millions of points of data and, through its powerful manipulation tools, it targets the precise information required and automatically translates this into a single, easy-to-digest report of your VMware vSphere® estate in the form of a "health check".

The authors of SONAR are currently seeking organisations to take an active part in the Beta testing programme for this innovative reporting tool, in exchange for a FREE health check of their vSphere environment, backed up by a VMware-accredited consultant for half a day on-site.

Gavin Jolliffe, CEO at Xtravirt, states: "We have been overwhelmed with the response from organisations wishing to participate in the SONAR Beta programme, but there is still room for a few more as we are committed to obtaining as much diverse feedback as possible."

Applications for becoming a Beta test site are now open and can be found at SONAR Beta Programme (http://www.sonar-raas.com).

Praise for SONAR - SONAR sets the benchmark for a world-leading architecture practice (http://www.sonar-raas.com/pdf/SONAR_CS.pdf)

About Xtravirt

When it comes to credentials, Xtravirt is the only IT consulting services organisation in Europe to hold all of VMware's currently available partner solution competencies in cloud, workspace and data centre. Many of Xtravirt's solutions and service offerings are enhanced through the application of SONAR as part of their extensive toolsets, until now only available to their own consulting team. This means that Xtravirt provides tangible competitive benefits by reducing project timeframes and costs, enabling a faster ROI for customers.

Xtravirt has been providing FREE utility software to the IT technical community for nearly a decade, having realised early on that the more free tools a company provides, the more goodwill is developed with IT administrators in the trenches. Xtravirt is then front of mind as a reliable source with a deep technical appreciation when the need comes to purchase a product with more features, such as SONAR. Impressively, Xtravirt has logged over 370,000 download requests for technical white papers and nearly 140,000 people have downloaded their highly popular FREE utility software to assist with the support of virtual environments.
