

# Test Event Generator from Revector: accurate bills for telecommunications operators

Submitted by: XL Communications

Wednesday, 18 November 2015

---

Mobile anti-fraud and revenue protection specialist Revector (<http://www.revector.com/>) today announces a fully updated version of its Test Event Generator, enabling telecommunications service providers to conduct advanced remote testing to ensure they are providing accurate customer timing and billing information.

Uniquely, Revector's Test Event Generator is available as an Android application, which can be fully customised for the specific needs of network engineers. This provides easy and flexible access to remotely test, identify and accurately diagnose any aspect of customer billing services, from top-ups to balance checks.

According to analyst research, mobile service providers lose \$58 billion in revenue each year to fraud and mis-billing, which can be caused by any number of issues including: inaccurate timing of calls; incorrect allocation of tariffs; non-arrival of SMS or MMS messages, and unclear or inaccurate recording of consumed data.

The latest version of Revector's Test Event Generator enables mobile networks to remotely test any aspect of its customer billing services, including:

- Ensure timings within the network are accurate to hundreds of a second
- Assess the volume of messages that are not being delivered correctly
- Measure data sessions to ensure accuracy of data use
- Assess where network infrastructure is failing to deliver accurate billing information

Andy Gent, CEO and Founder of Revector comments: "Network service providers are often unable to deliver the level of granularity needed to ensure accurate billing. Because the networks will err on the side of caution, billions of dollars of revenues are not being collected."

"Revector's Test Event Generator solution transforms accurate measurement of network billing capability from something that was difficult, expensive and unwieldy into something that is customisable, simple to deploy and delivers an instant return on investment."
