

Clinerion's Patient Recruitment System promises acceleration of clinical trial patient recruitment in the UK

Submitted by: Clinerion Ltd.

Monday, 14 March 2016

Clinerion will present its Patient Recruitment System, which allows real-time patient search for clinical trials via simultaneous query of multiple sets of electronic health records, at the UK e-Health Week.

Basel, March 14, 2016 – Clinerion will introduce the disruptive innovation brought to clinical research by its Patient Recruitment System (PRS) at the UK e-Health Week, at the Olympia exhibition centre, London, April 19-20, 2016. Clinerion will give live demonstrations of PRS at Booth #45, as well as a presentation on the “TED Talks” stage on the exhibition floor.

Visitors to the booth will be able to see how Clinerion’s PRS accelerates recruitment, attracts clinical trials to hospitals, and brings savings to clinical research. PRS speeds up patient recruitment by identifying up to 30 times more patients compared to manual screening, and giving results within minutes rather than the weeks, or months typically needed. The system increases the efficiency and effectiveness of the clinical trial process by enabling the selection of sites and identification of screening candidates in real-time.

On the “TED Talks” stage at 11.00 a.m., Tuesday, April 19, 2016, Clinerion’s Head of Sales, Tigran Arzumanov will present PRS as Clinerion’s solution to the problem of slow patient recruitment being the number one reason for clinical trial delays, in a talk entitled “Needle in a Server Stack – clinical trial patient recruitment using multi-hospital EHR integration.”

Clinerion’s PRS is unique in the landscape of EHR-based solutions in offering a combination of complex query definition, real-time search across multiple networked EHR-systems, and a highly scalable hybrid cloud- and local installation-based platform.

“Hospitals and clinical research centres in the UK have not yet had the opportunity to see how PRS can revolutionize patient recruitment,” says Arzumanov. “Hospitals using PRS can find patients for studies quickly and reliably, while at the same time attracting clinical studies that are right for the patients they have.”

Clinerion recently launched PRS in North America via high profile presence at two major conferences.

“Our introduction of PRS in North America made a great impact at the SCOPE Summit and HIMSS16,” says Clinerion CEO, Ulf Claesson. “The revolutionary benefits we bring will also resonate in the UK and across all of Europe. Our approach allows the identification of patients eligible for enrolment in trials, while maintaining patient data security, which is built in to Clinerion’s PRS.”

About Clinerion

Clinerion is an international technology services company offering highly scalable electronic patient recruitment solutions to increase efficiency and quality in clinical research. The company's Patient Recruitment System connects to and leverages existing electronic medical records. Following international privacy and confidentiality standards, Clinerion's solutions pseudonymize, enrich and normalize those records and facilitate real-time patient recruitment for clinical trials.
