Cloud Commerce Pro accesses carrier services through the NetDespatch platform and offers this value-added feature to its customers

Marlow, 20th April 2016 - NetDespatch, the leading parcel data management platform for postal and parcel carriers, is pleased to announce that software provider, Cloud Commerce Pro (<http://www.cloudcommercepro.com/>), has joined the NetDespatch Partner Programme.

This successful partnership has enabled Cloud Commerce Pro to not only provide a comprehensive management system for its retailers and e-tailers alike, but it also enables the company to keep its back office and parcel shipments seamless and organised, and as a result, its customers happy.

Cloud Commerce Pro's management systems provide everything that a retailer or e-tailer needs to meet their cloud commerce requirements. The Cloud Commerce Pro software takes care of everything from wholesale trade ordering to stock control, inventory, shipping and fulfilment; to CRM systems, multi-channel ecommerce and accounting. A cloud-based system, Cloud Commerce Pro is accessible by secure-login via the internet browser, so there are no licences or software downloads and the software is compatible with the latest PC and Apple Mac Browsers. Now, the Cloud Commerce Pro software solution also integrates with NetDespatch to provide seamless carrier integration for its customers.

Cloud Commerce Pro's web service integration with NetDespatch allows APC Overnight, Yodel and Royal Mail customers using Cloud Commerce Pro to seamlessly integrate with their carriers, print the correct labels and produce any shipping documentation required all of which are produced without the need for manual intervention or any data re-entry.

Technical Director at Cloud Commerce Pro, Stuart Forrest, comments: "As demand for carrier integrations has grown, especially from our Royal Mail customers, we needed to find a partner that could help us integrate quickly. NetDespatch's quick carrier integration process, which is undertaken in a matter of days rather than months, meant that we could help our customers provide effective and efficient delivery options to the end consumer almost immediately with no downtime. The other key aspect in all of this is that there is no cost or charge to our customers for this additional feature."

Today, we integrate with a whole raft of different carriers and this has meant that we can offer options to our customers and it has enabled us to continue to grow our business."

Ends

About NetDespatch:

NetDespatch is the leading SaaS parcel data management platform for postal and parcel carriers worldwide.

Recognised as one of the top independent Cloud Computing providers in the UK, the platform currently enables carriers to provide more than 130,000 of their business customers with solutions to seamlessly integrate ecommerce websites, sales order processing and warehouse systems at point of despatch. Users can print the correct shipping labels, customs documentation and manifests, and automatically pre-advise their carrier of incoming parcels. For more information visit www.netdespatch.com.
