

Intensive skin tightening with Meso-CRF®, by LipoTherapeia

Submitted by: LipoTherapeia - Beauty

Friday, 17 June 2016

LipoTherapeia's Meso-CRF® treatment combines the strongest body skin tightening (<http://www.lipotherapeia.com/tighten>) technology known today (high intensity monopolar radiofrequency) with the most concentrated skin tightening natural actives, for maximum results.

Skin looseness is a major issue for women today, due to our artificial living - even for slim women (<http://www.lipotherapeia.com/slim-women-treatment-london-anti-cellulite-skin-firming-lifting-slimming>) or models (<http://www.lipotherapeia.com/models-and-dancers-treatment-london-anti-cellulite-skin-firming-lifting-slimming>). Sitting down for 10 hours a day, continuous dieting, low protein intake, eating sugary snacks, smoking and pregnancy, either make skin lose collagen and elastin or damage the quality of existing skin collagen.

It is widely established today that the strongest skin tightening treatment - barring skin removal surgery such as "tummy tuck" or "thigh tuck" - is high intensity "monopolar radiofrequency" (<http://www.lipotherapeia.com/deep-tissue-radiofrequency-cellulite-removal-fat-reduction-skin-firming-tightening-lifting-treatment>) i.e. the strongest and deepest acting type of radiofrequency treatment. It is also widely accepted that highly concentrated extracts of centella asiatica, hydroxyproline, ascorbic acid, carnosine and cocoa extract are amongst the strongest skin firming and collagen and elastin protecting natural actives known today.

LipoTherapeia, the only aesthetic practice in London solely dedicated to skin tightening and cellulite, provides Meso-CRF® (<http://www.lipotherapeia.com/cellulite-reduction-skin-tightening-fat-removal-treatment-london-radiofrequency-electromesotherapy>) an exclusive combination of radiofrequency and electro-mesotherapy.

Meso-CRF® combines the strongest monopolar radiofrequency available (350 W), with electro-mesotherapy which helps a highly concentrated cocktail of multiple natural actives penetrate the skin and reach fibroblasts (collagen cells) for maximum results. This comprises 95%+ purity actives, including botanical extracts of centella asiatica, ascorbic acid, cocoa polyphenols, hydroxyproline and carnosine, among several other natural actives.

"At LipoTherapeia, we only specialise in radiofrequency and electro-mesotherapy and we provide 1,000 such treatments every year (6,000 Meso-CRF® treatments provided so far), so you are guaranteed to receive expert consultation and treatment", states cellulite and skin tightening expert Georgios Tzenichristos and explains: "Our technique, developed over 6 years and based on our study of radiofrequency Physics, is very specific to deep collagen tightening (action on the dermis and subdermis). This is in contrast to the majority of RF treatments that work on the epidermis and have no effect on deep skin tightening and lifting."

According to Georgios this knowledge is key to Meso-CRF® being 99.6% safe, pain-free, non-invasive and with zero downtime, in contrast to other radiofrequency treatments.

Meso-CRF® is suggested for treatment of loose skin on thighs, hips, bottom, stomach, upper arms, hands, neck, décolletage, breast, chin, jowl, cheeks, full face and under-eye. Results are seen immediately, due to an immediate contraction of existing collagen, and also for several months, due to stimulation of new collagen production.

Of course Meso-CRF® is not a miracle treatment, and it is not recommended for severe skin laxity, but for those suffering from moderate skin looseness, Meso-CRF®'s combination of strong, deep tissue radiofrequency with multiple skin firming actives is currently the most advanced skin tightening technology available.

- > Meso-CRF® treatments currently cost £145 and are exclusively available at LipoTherapeia, 7 Park Crescent, London, W1B 1PF
- > Free treatments are available to journalists/bloggers (only established publications and blogs please)
- > A course of 6-12x weekly sessions is recommended, depending on severity and on how fast the body reacts to treatment.
- > Maintenance treatments: once a month or a course of 3-6 sessions once a year to maintain firmness.
