Intershop Commerce Management and Microsoft Dynamics NAV are core technologies for Azure cloud e-commerce

The aim is to provide customers with a consistent, industry-oriented SaaS offering

Jena, Germany, 18 August 2016 – Intershop (<http://www.intershop.com>) Communications AG and Microsoft have today announced the development of an innovative cloud-based e-commerce offering. This means that the Intershop Commerce Management will provide customers with a leading e-commerce technology as a scalable solution in Microsoft's Azure cloud platform. Microsoft will simultaneously support Intershop in seamless integration with existing cloud-based Dynamics NAV industry partner solutions. Such a solution is highly attractive to growth-oriented small to medium-sized companies in particular, who want to boost their online sales. The benefits of this approach include easy and fast e-commerce project implementation, flexible solution scalability, usage-based billing, very low capital commitment, and extremely high reliability – without needing to supply proprietary IT resources. With regard to international sales, the application and data can be hosted wherever they are regionally required. All enterprises can achieve an ROI (Return on Investment) within the shortest time, by opening up new sales channels in this way.

In conjunction with the Synaptic Commerce architecture geared for extensibility, further successive cloud-based solutions will be provided for Intershop Commerce Management and Dynamics NAV, designed to offer industry-specific solutions.

Dr. Jochen Wiechen, Intershop Communications AG CEO, sees huge potential in the collaboration: "The joint offering of Intershop and Microsoft based on the Azure platform provides a combination of leading, proven technology and extreme flexibility at minimal investment costs. Which systems our customers prefer to integrate for their individual solution, the regions in which they want to make this sales channel available, and the volume to be run on it - all of the above, companies can choose freely according to their requirements and sales strategy. Overall, in this solution, small to medium-sized companies discover a series of answers to challenges they currently face."

"Intershop customers will in future therefore benefit from the scalability and flexibility of Microsoft Azure and the global Microsoft cloud platform, the strengths of which are already proven in the e-commerce field with its high demands on time-to-market speed, availability, and scalability in both directions," says Peter Jaeger, Senior Director Developer Experience (DX) and Microsoft Germany Board Member.

About Intershop Communications AG
