

Dynama's enterprise resource planning and workforce optimisation software now available on G-Cloud 9

Submitted by: PR Artistry Limited

Wednesday, 16 August 2017

London, UK - Dynama has announced that its commercially proven resource planning and workforce optimisation software has been accepted onto the latest iteration of the Government's Digital Marketplace, G-Cloud 9. Dynama's technology and services enable public sector and defence organisations to plan and optimise resource and people to create high-performing teams safely, efficiently and cost-effectively. Dynama already supports some of the most complex operations in the public sector worldwide including the UK's Royal Fleet Auxiliary and other allied military forces.

Dynama has 25 years' experience of providing the specialist knowledge and technology necessary for both commercial and government customers in heavily regulated industries where legislative compliance, health & safety; and the deployment of scarce, expensive and highly qualified resource are top priorities. Automated, highly flexible software from Dynama helps customers to deliver complicated projects with fast and efficient workforce and resource optimisation strategies.

Andrew Carwardine, Managing Director of Dynama said, "It is a great achievement to be accepted onto the Government's latest G-Cloud framework as a trusted supplier and be able to share the benefits of our technology with the widest possible audience. As public sector organisations look to boost efficiencies in operations and cost savings, our proven automated solution provides the answer. Recent investment in Software as a Service (SaaS) architecture coupled with our powerful 'Customer Success' methodology combine to bring clients tangible value."

Towards the end of 2016, Dynama upgraded its original resource planning and workforce scheduling solutions to offer Dynama OneView. This single, integrated platform gives leaders a dynamic understanding of the demands on personnel and resources anywhere in the world and at any time. Based on SaaS architecture, OneView eliminates the need for hardware, saves on infrastructure costs and capital expenditure. For more information, visit www.dynama.global
