With the Tenda Nova MW6, the whole family can effortlessly connect, stream, game and download at the same time

London, 13th December, 2017 – Increasing numbers of connected devices causes connection drop offs, slow performance and dead spots. Most homes in the UK suffer from these common WiFi problems. The new Nova MW6 ([http://www.tendacn.com/en/product/nova MW6.html](http://www.tendacn.com/en/product/nova%20MW6.html)) Mesh Wi-Fi system from Tenda Technology (<http://tendacn.com/en/default.html>), a leading manufacturer of networking devices, has been created to optimise your home network, eliminating connection frustration, by blanketing your home with fast, efficient and reliable WiFi coverage. With the Nova MW6 in place, householders will be enabled to start their journey to their Smart Home of the future.

The ideal solution for improving WiFi reception throughout your home, the Nova MW6 kit, which includes three WiFi nodes as standard, provides wireless coverage for spaces up to 6,000 square feet. Powered by the latest True Mesh technology, each node is capable of performing as a router or an extender and connect seamlessly with each other to provide whole home wireless coverage. The nodes have been cleverly designed to look and feel stylish, but more importantly, boast a seamless roaming feature so that you can move freely from room to room without losing WiFi connection for lag-free video calling and internet browsing, and consistent online gaming.

Creating the ultimate home WiFi network to connect all your phones, computers, tablets and WiFi smart home gadgets couldn't be simpler. The configuration free Nova MW6 provides an effortless 'plug and play' setup experience thanks to its automatic networking feature with all nodes paired to each other straight out of the box. Whilst the companion Mobile App from Tenda provides an abundance of customisable, family-friendly remote features such as; parental controls, password management, user access and guest networking – bringing everything under your control whilst you are at home or away.

The Nova MW6 performs fast where conventional routers struggle. Offering significantly better communication efficiency, the Nova MW6 not only includes 'Smart Auto-path Selection' technology to ensure a robust wireless network which maximises a faster home internet for ALL users, it also uses cutting-edge 'Wave2 MU-MIMO' technology to enable uninterrupted communication with multiple wireless devices simultaneously. Now multiusers can stream, game and download at the same time!

Wi-Fi dead zones are a universal problem with traditional wireless networks but the Nova MW6 delivers phenomenal WiFi coverage. With many traditional network bridges being set up over 2.4 GHz band, they can suffer from strong interference, high instability, heavy transmission loss and low efficiency. However, Nova MW6 can set up network bridges over 2.4 GHz and 5 GHz bands, navigating connection through the optimal band to ensure much faster transmission for a relentless wireless internet experience all the time, every time.

"The Nova MW6 really is at the centre of your smart home, it can handle simultaneous connections from multiple devices and even works with Alexa allowing you to control compatible devices," said Jason

Zhao, General Manager of Tenda UK & Rol. "With Nova MW6, we're not only joining the Mesh Wi-Fi trend, but we're taking an active and leading role in the support for the latest technologies

that simplify its installation and ensure great coverage thanks to the use of the latest industry standards," Jason concluded.

#### Price and Availability

The Tenda Nova MW6 Mesh Wi-Fi system is available from Amazon

([https://www.amazon.co.uk/Tenda-MW6-2-port-Wireless-Router/dp/B076VPYT36/ref=sr\\_1\\_1?ie=UTF8&qid=1513012490&sr=CCL](https://www.amazon.co.uk/Tenda-MW6-2-port-Wireless-Router/dp/B076VPYT36/ref=sr_1_1?ie=UTF8&qid=1513012490&sr=CCL)

(<https://www.cclonline.com/product/245225/NOVA/Cable-Routers/Tenda-nova-MW6-Whole-Home-Mesh-WiFi-System/NET28>

and Novatech
