

Free Vision Correction Surgery for Journalists at Optimax

Submitted by: Optimax Clinics Ltd

Monday, 29 January 2018

Optimax, the UK's longest established vision correction specialists, is introducing new lens implant technology in 2018 and are now inviting approaches from established journalists interested in receiving corrective eye treatment on a complimentary basis.

The offer comprises laser eye surgery as well as lens procedures, meaning there are treatments which can provide freedom from glasses and lenses for people of all ages.

Our treatments can provide good vision and spectacle independence for a wide range of prescriptions, with no upper age limit.

In return, we would look for participating journalists to secure a feature in a well-known title with national recognition, or equivalent platforms with national reach.

Proposals from digital influencers who can demonstrate high engagement volumes for their output (especially video content) will also be considered.

Free consultations to establish suitability are available at Optimax clinics throughout the UK, and carry no obligation to proceed.

For more information about our treatments, or to discuss the offer further, please get in touch via the details provided.

Optimax is the UK's longest established vision correction specialist, with 20 clinics nationwide. Its range of procedures can treat short sight, long sight and astigmatism. With experience drawn from more than 380,000 treatments, Optimax has been treating since 1991. Its recent investment in Schwind laser technology means that even more people can see life more clearly.
