TELEMISIS LAUNCH NEW LIQUID STORAGE TANK MONITORING SERVICE - REDUCE TANK OPERATING COSTS THROUGH OPTIMISED SITE VISITS

BRISTOL, UNITED KINGDOM, 19th June 2018: Telemisis, a leading provider of Industrial IoT and remote monitoring and control solutions for industrial and telecommunications applications, today announces the launch of a new Liquid Storage Tank Monitoring Service (<https://www.telemisis.com/sectors/liquid-storage-tank-monitoring>).

Consisting of SitePro, TankNode, cellular airtime, and a novel business model, the new solution provides an out-of-the-box liquid storage tank monitoring capability that is simple and easy to deploy.

Discussing the new service, Chris Begent, Commercial Director, Telemisis, said "Already in operation with major international organisations, our new Liquid Storage Tank Monitoring Solution, drives down tank operating costs, while minimising capital expenditure ... providing a pathway to additional monitoring and control capabilities."

Available with no upfront capital investment, the new Liquid Storage Tank Monitoring Solution allows owners and operators of liquid storage tanks, including water, diesel, heating oil, lubricating oil, and AdBlue tanks, to reduce the operating costs of their assets by optimising site visits and avoiding or mitigating potentially costly events.

FLEXIBILITY AS STANDARD

Once in operation, the solution can be expanded to monitor and control other asset types, such as generators, communications infrastructure, and industrial processes, through the deployment of additional SiteNode3G (<https://www.telemisis.com/sitepro/sitepro-nodes#portfolio>) and SiteNode3G+ (<https://www.telemisis.com/sitepro/sitepro-nodes#portfolio>); while retaining the same SitePro user interface, applications and back-end.

To discover more about the service, please visit www.telemisis.com/sectors/liquid-storage-tank-monitoring (<https://www.telemisis.com/sectors/liquid-storage-tank-monitoring>)
