London, UK – 6th July 2018: Planet Computers (<http://www.planetcom.co.uk/>) today launches its official agenda application for the Gemini PDA. Available for download on Android from the Google Play store, the app is inspired by the iconic agenda function of the Psion organiser series.

Developed specifically for a landscape user interface (UI) and keyboard control, the Gemini Agenda application is packed with features, including: day, week, month and yearly view modes; multiple and shared calendars; anniversary reminders; email invitations via Google; and the ability to use Google Maps to set locations for events.

For frequent travellers, Agenda features a time-zone management function enabling users to view their diaries in both their local time zone and the zone in which an event is taking place – all at the push of a button. The application can also be used to create and manage multiple To-Do lists, allowing users to set reminders and tick off individual tasks once they have been completed.

The Gemini Agenda app has been under development for nearly a year, undergoing a rigorous testing phase following Mobile World Congress 2018. It can be downloaded here:
<https://play.google.com/store/apps/details?id=com.pripla.gemagenda>

Dr Janko Mrcic-Flogel, CEO of Planet Computers comments: “The Gemini Agenda re-imagines one of the Psion’s most popular applications. Agenda will give users greater control of their lives, allowing them to plan, manage and co-ordinate events and activities in an effective and efficient manner. Whilst the focus in the mobile device market has been on user-generated content creation gimmicks and increasing ways of consuming content and advertising, Planet Computer’s Agenda helps bring the user’s attention back to what is important in their own lives.”

The release of the app marks a significant milestone in the Gemini journey – one that has been eagerly anticipated since its launch.

To date, the Gemini PDA has raised more than \$2.3 million in investment. For the latest updates, click here: <http://ow.ly/qaFD30g3lhv>.

Notes to editors:

About Planet Computers:

Planet Computers launched the Gemini PDA crowdfunding project on the Indiegogo platform in March 2017,

and is close to trebling its original target to support the development programme. Planet Computers is now in the final stages of fulfilling all backer orders, raising more than \$2.3 million in investment in the process. The Gemini PDA is now available to buy from the Planet Computers online shop.

The Gemini is a 4G and Wi-Fi device with a full physical keyboard and runs on the Android and Linux platforms. With a 5.99" screen, 5 megapixel camera and stereo speakers it provides a communications, media consumption and social media device for the 21st Century. Gemini PDA is available in a variety of different keyboard language layouts.
