- App development inspired by world's first ever email to mobile service
- Airmail app "gives users the ability to be more productive on the go"
- Available to download now from Google Play Store

(<https://play.google.com/store/apps/details?id=com.gemini.airmail>)

CES 2019, Las Vegas: Planet Computers (<https://planetcom.squarespace.com/>) today launches its official Airmail application for the Gemini PDA. Available for download from the Google Play store, the app has been developed to be an independent email application for Gemini users running the Android operating system.

Developed specifically for a landscape user interface (UI), Airmail integrates with the Gemini Agenda application to provide users with shortcut keys to quickly and effectively manage their workload.

Based on K-9, Airmail allows you to access IMAP, POP3 and Exchange (via WebDAV) email accounts and includes a number of unique features, such as: messaging preview bar; advanced search function to sort emails by sender, date, subject and attachment; and compatibility with both keyboard and mouse controls.

Airmail is a reincarnation of its namesake - the world's first email to mobile service - which launched in 1994 and was also built by Planet Computers CEO, Dr Janko Mrsic-Flogel. The original Airmail application converted email messages to SMS and used the GSM network to deliver these to mobile devices.

The release of the app marks a continuation of investment in software for Planet Computers' handset devices – the award-winning Gemini PDA and Cosmo Communicator.

Dr Janko Mrsic-Flogel, CEO of Planet Computers comments: "Email on the go is one of the major reasons for writing on the move. We brought back Airmail in the form of an Android app – closely aligned with Gemini and Cosmo – to offer users a new way to manage their workload using the keyboard functionality and landscape user experience of our products. The integration with other Planet Computers apps gives our users the ability to be more productive on the go."

-Ends-

Notes to editors:

About Planet Computers:

Based in London, Planet Computers (<https://planetcom.squarespace.com/>) is the mobile handset manufacturer behind the award-winning Gemini PDA and the new Cosmo Communicator.

Inspired by the Psion devices of the mid-1990s, Planet Computers wanted to reimagine the clamshell form-factor for modern audiences. Following a hugely successful Indiegogo campaign in 2017, the company raised \$2.5 million in investment in the Gemini PDA – nearly tripling its original target. Users all

around the world now use the Gemini PDA and Planet Computers has recently launched a new smartphone/pocket computer - the Cosmo Communicator.

Alongside mobile hardware, Planet Computers has also developed and released original software exclusively for its devices - including the popular Agenda, Notes and Data applications which are available to download from the Google Play store.
