- OXI on the Gemini PDA on show at Mobile World Congress 2019 – visit Planet Computers in Hall 7, Stand 7K40

MOBILE WORLD CONGRESS, Barcelona: Planet Computers (<https://planetcom.squarespace.com/>), in conjunction with mobile software developer Auxens (<https://www.auxens.com/>), announces the availability of OXI for the Gemini PDA. OXI (<https://www.getoxi.com/>) is an Android-based virtual operating system that enables users to run both mobile and virtual applications in a multi-window desktop environment.

By connecting the Gemini PDA to an external display, OXI provides a fluid desktop user experience: reducing mouse latency and enabling easier access to CPU resources, as well as providing the ability to launch business applications such as Adobe Photoshop and Microsoft Office.

OXI enables users to edit documents and complete multiple tasks simultaneously in different windows, while still being able to use the Gemini's large 5.99-inch screen – including the ability to take calls and send/receive messages.

The Gemini PDA links to an external secondary HD display and runs OXI via Gemini's USB-C to HDMI accessory. Windows can be resized full screen with the touch of a button for maximum productivity and to streamline workflows. Push notifications appear on the right hand side of the desktop display, so users never miss the latest notifications.

Dr Janko Mrcic-Flogel, CEO of Planet Computers, comments: "The smartphone is essential to the way people work. Gemini was designed to offer something unique to the mobile handset market: a productivity tool that allows users to work and play from a single device with an integrated keyboard. Our collaboration with Auxens takes this to a whole new level – creating a multi-window desktop experience from a PDA."

Laurent Alaguero, President of Auxens, added: "By connecting your Gemini PDA to a monitor or dock station, OXI allows you to use it as your main computer – meaning your entire digital environment now fits in your pocket."

OXI for the Gemini PDA will be available when purchasing official HDMI cable from the Planet store.

Notes to editors:

About Planet Computers:

Based in London, Planet Computers (<https://planetcom.squarespace.com/>) is the mobile handset manufacturer behind the award-winning Gemini PDA and the new Cosmo Communicator.

Inspired by the Psion devices of the mid-1990s, Planet Computers wanted to reimagine the clamshell form-factor for modern audiences. Following a hugely successful Indiegogo campaign in 2017, the company raised \$2.5 million in investment in the Gemini PDA – nearly tripling its original target. Users all around the world now use the Gemini PDA and Planet Computers has recently launched a new smartphone - the Cosmo Communicator.

Alongside mobile hardware, Planet Computers has also developed and released original software exclusively for its devices - including the popular Agenda, Notes and Data applications which are available to download from the Google Play store.

To discover more about Planet Computers and its vision, please visit www.planetcom.co.uk (<https://planetcom.squarespace.com/>)

About Auxens:

Based in Versailles, Auxens, specialized in Android system development, is behind OXI, an Android fork that turns a smartphone into a computer.

Associated to a virtual application publication platform, OXI embed all business apps into a single user interface. All apps, all data available from a unique device, anywhere, anytime, connected... or not connected!

To discover more about Auxens, please visit www.auxens.com (<https://www.auxens.com/>), about OXI, www.getoxi.com (<https://www.getoxi.com/>).

A new Digital Workspace solution will be presented soon at www.digitalworkspace.auxens.com (<https://www.digitalworkspace.auxens.com/>).
