Security & Policing Home Office Event

5 – 7 March 2019

Farnborough International Exhibition and Conference Centre

Stand: F25

London, UK - Armour Communications, a leading provider of specialist, secure communications solutions, will be demonstrating the latest versions of Armour Mobile, Armour Blue and Armour Desktop at the Home Office's Security and Policing event.

Armour Comms' solutions for secure communications work on everyday smartphones, tablets and Windows 10 desktops. With the same usability as consumer-grade apps, and with significantly enhanced security, Armour Mobile supports voice calls, video calls, one-to-one and group messaging, voice and video conference calls, file attachments and sent/received/read message status. Message Burn limits the lifespan of sensitive data at rest, where users can set a time at which their messages are automatically deleted (or as the name implies, 'burn') on the recipient's device, for immediate action after being read, or in the future, according to confidentiality.

Armour will be showing a technology preview of the latest version of Armour Blue which includes Mission Critical Push to Talk (MCPTT) functionality that meets the requirements of public safety mission critical voice communication.

The latest version of Armour Desktop extends the secure mobile communications capabilities of Armour Mobile and Armour Blue via a Windows 10 softphone, and, can bring additional Command and Control capabilities.

In 2018, Armour successfully participated in a week of plug-testing for (MCPTT) protocols organised by the European Telecommunications Standards Institute (ETSI) and The Critical Communications Association (TCCA) in Texas. The protocols are fully integrated into the Armour Blue solution and supports different use cases including emergency and blue light, police and law enforcement, covert ops and others.

David Holman, Director at Armour Comms commented; "At Armour we are committed to developing and delivering highly usable, secure communications solutions. Our secure solutions are suitable for use by the Enterprise, as well as Government departments, Police and Law Enforcement and Special Services."

Using a FIPS 140-2 validated crypto core, Armour Mobile has been awarded many other certifications including CPA (Commercial Product Assurance) from the National Cyber Security Centre (NCSC) and is included in the NATO Information Assurance catalogue.

NOTES TO EDITORS

About Armour Comms

Armour Communications Limited is a UK based company supplying market leading technology for secure communication via 3G, LTE (4G), 3GPP, Wi-Fi and satellite for voice, video, messaging and data on Android, iOS and Windows platforms. Armour Mobile also features in-built secure conferencing (audio or video) between multiple callers and Push to Talk capabilities designed for blue light services.

Armour Mobile is available as a Cloud or an On-Premises solution, and by using the optional Armour Connect Gateway, integration to a customer's PBX and standard office desk phones is possible. With its focus on interoperability Armour Mobile was the first secure communications app to connect to Skype for Business (previously called Lync) using standard Cisco SIP-based technology, and Armour Desktop extends the secure mobile communications functionality of Armour Mobile and delivers it to organisations via a Windows 10 client.

Together Armour Mobile and Armour Desktop enable users inside and external to the organisation to communicate transparently within a secure and private environment, while taking advantage of the reduced costs and increased flexibility provided by Voice over IP corporate communications.

Armour solutions are FIPS, NATO and CPA approved up to OFFICIAL-SENSITIVE, with additional security layers to mitigate threats up to SECRET.
