---

National Ventilation (<https://www.nationalventilation.co.uk/>), a leading UK-based ventilation manufacturer and supplier, has triumphed at the prestigious Electrical Wholesaler Awards 2019. The company's Monsoon IntelliSystem Heat Recovery Unit (<https://www.nationalventilation.co.uk/wp-content/uploads/2018/08/IntelliSystem-Heat-Recovery-datasheet.pdf>) took home the 'Best Energy Saving Product' award while its Monsoon Zone 1 Silence Range (<https://www.nationalventilation.co.uk/wp-content/uploads/2018/12/NatVent-Zone-1-Silence-Range-Datasheet.pdf>) was also Highly Commended in the 'Best New Product' category. The Somerset-based company received the accolades at an awards ceremony at the Tower Hotel in central London. Attended by the biggest names in the electrical sector the event was hosted by comedian Sean Collins.

Competition in this year's Electrical Wholesaler Awards was fierce, with a record number of entries and a huge number of votes across both manufacturer and supplier categories, with decisions proving tough in the judged categories. National Ventilation kicked off the awards ceremony collecting a trophy for a new category, 'Best Energy Saving Product'. Awarded for its Monsoon IntelliSystem Heat Recovery Unit, the entry scored well with both voters and the expert judging panel for the unit's technical and practical excellence.

"We are thrilled to have won the 'Best Energy Saving Product' at these key industry awards. To have the IntelliSystem Heat Recovery Unit chosen as the best energy saving product by electrical wholesalers, who voted for the winners of the awards, is the icing on the cake" said Mick Daniels, Sales Director at National Ventilation. "It's wonderful feedback from the industry that our customers love our products and we are very thankful for this mark of support."

National Ventilation's Monsoon IntelliSystem Heat Recovery Unit offers a smarter way to whole house ventilation. A Mechanical Ventilation with Heat Recovery (MVHR) unit that is near silent, the IntelliSystem has market-leading efficiency and offers easy control via its touch screen or Wi-Fi linked App. Designed to provide the maximum level of control and comfort available, it continuously supplies and extracts air throughout the home and features a heat exchanger which recovers up to 93% of the heat energy. The handy app offers easy installation and also aids wireless commissioning, removing the need for installers to repeatedly return to the unit during commissioning of airflows, in turn this encourages best practice and high performance. In addition, this lightweight unit offers a complete summer bypass facility, left/right handing, pre-heater & post heater options and ISO ePM2.5 & ISO ePM10 filter options to help ensure a healthy environment for households with good indoor air quality.

Meanwhile, National Ventilation's new and improved Monsoon Zone 1 Silence Range, was highly commended in the 'Best New Product' category. An innovative domestic ventilation solution the Monsoon Zone 1 Silence fan provides high extraction rates with a low energy use of just 7.5kW and an exceptionally quiet running volume as low as 22dB(A). Offering two speeds, the Monsoon Zone 1 Silence range is suitable for window, ceiling or wall mounting and is easier than ever to install thanks to the larger terminal block which makes wiring easier and a spirit level bubble to ensure a straight install.

Offering improved performance too, with longer duct runs at 15l/s, the Monsoon Zone 1 Silence comes with

a long-life ball bearing motor and a silent back draft shutter preventing air travelling back up the duct and into the room. With a range of control options including Basic, Timer, Humidistat and PIR, the Part F and L compliant fan comes in three sizes; 100mm, 125 mm and 150mm. In addition, the fan's IPX5 rating means it can be safely installed within Zone 1 without the need for a low voltage transformer, ideal for a small bathroom or shower room where space is at a premium. And as the best value intermittent bathroom fan on the market, the range now comes with an unprecedented five-year guarantee.

National Ventilation has one of the largest and most diverse ranges of ventilation products in the UK, specialising in innovative, energy-saving ventilation products that can accommodate domestic, commercial and industrial applications. National Ventilation's Certified Ventilation Team can inspect, test and provide information for any of the common types of domestic ventilation systems in the UK whilst its free design service includes unit calculations, a full kit list as well as recommended duct routes. For further information on all products and services offered by National Ventilation telephone 01823 690 290 or visit <http://www.nationalventilation.co.uk>.
