Company Achieves AWS EUC Competency Status

London, UK - 8th August 2019 – Rebura LTD (<https://rebura.com/>), a cloud and technology consultancy, today announced a 40% year-over-year growth in the UK market, forecasting a further 40% increase in turnover for year three. In addition, Rebura has achieved Amazon Web Services (AWS) End User Computing (EUC) Competency status

(<https://aws.amazon.com/blogs/apn/enable-your-workers-and-protect-sensitive-data-with-solutions-from-aws-end-user-computing/>) and strengthened its lead in the provision of EUC technologies, boosting momentum and broadening its audience in the space.

As an inaugural Advanced Consulting Partner in the AWS Partner Network (APN) in the UK, Rebura is paving the way as a top validated EUC specialist, with technical capabilities in provisioning services and offerings designed to help with strategy, professional services, managing infrastructure, repeatable intellectual property, and optimization of EUC technologies on AWS.

The EUC Competency recognises that Rebura provides proven technology and deep expertise in supporting customers to provision, protect and gain intelligence from end-point devices, end-user apps, and data on AWS. The EUC Competency status strengthens and extends Rebura's presence in the market, complementing its existing portfolio of cloud services.

"To be acknowledged by AWS for our skill in providing these services at this stage of our growth is a testament to the dedication and hard work of our team said Aaron Rees, Managing Director, Rebura. We are extremely proud to achieve AWS EUC Competency status – offering services that uniquely address EUC challenges to help companies achieve their technology goals, leveraging the agility, breadth of services, and pace of innovation that AWS provides. As an AWS only consultancy, we continue to expand our knowledge to provide deep expertise and seamlessly deliver solutions to our customers."

Commenting on Rebura's successes, customer, Rory Gaston, Director at Saragossa – a recruitment agency - says "Following consultation with Rebura, they recommended and configured an AWS workspace environment for us, improving our systems speed and efficiency. This has, in turn, increased productivity of our staff, as well as significantly lowering our CAPEX IT spend by as much as 80%. Additionally, as our business has expanded, we had previously not been confident that all of our data was secure. With Rebura's knowledgeable system design and implementation, we're now able to spin up new offices at pace, without fear of security or compliance being compromised."

With a solid pipeline of AWS deployments and a strong sales methodology going forward, Rebura is confident in its continued strategy for growth. Rebura selected AWS as its preferred provider and achieving the AWS End User Computing (EUC) Competency differentiates Rebura as an Advanced Consulting Partner that provides specialized, demonstrated, technical proficiency and proven customer success with specific focus on helping customers deploy AWS EUC services.

About Rebura

Rebura (<https://rebura.com/>) are one of the UK's fastest growing AWS Service Provider and focuses purely on using AWS technologies to help their customers increase productivity, scalability, cost efficiency, and security. Being an APN Partner allows Rebura to provide services and features that are not readily available. This includes free proof of concept credits and access to features before public release.

Rebura works with companies from start-ups to global finance providers to help create and/or deliver their roadmap. Rebura's highly skilled and knowledgeable team are available 24x7x365 to support and manage AWS environments.

About AWS

AWS (https://aws.amazon.com/?nc2=h_lg) is enabling scalable, flexible, and cost-effective solutions from start-ups to global enterprises. To support the seamless integration and deployment of these solutions, AWS established the AWS Competency Program to help customers identify Consulting and Technology APN Partners with deep industry experience and expertise.

Notes to Editors
