

BIOS IT partners with IBM® to deliver revolutionary POWER9™ solutions.

Submitted by: BIOS IT

Monday, 30 September 2019

London, Sept. 30th: BIOS IT, a global HPC solutions integrator, has announced a new OEM partnership with enterprise hardware titans IBM (<https://www.bios-it.co.uk/partnerfocus/ibm.aspx>). The new alliance enhances BIOS IT's diverse portfolio of x86 based solutions adding the full suite of IBM® POWER9™ AI-focused and scale-out systems. The POWER9™ product range offers enhanced core and chip architecture for next-generation applications.

With a rich history of delivering solutions for Artificial Intelligence (AI), Deep Learning and Big-Data workloads to a wide range of markets including research institutions, academia, tier-one banks, automotive organisations and healthcare, BIOS IT will now include the POWER9 AI infrastructure range in its portfolio of AI offerings. Built for the most data-intensive and demanding computing workloads, the POWER9 range from BIOS IT will enable users to build and train AI models with flexible deployment options.

BIOS IT will also offer the IBM scale-out server range for Big-Data workloads - designed for cloud deployments for data-intensive mission-critical workloads. This server range has been designed from the ground up for Big-Data workloads and is built with innovations that deliver unprecedented security and reliability. Featuring twice the memory footprint than previous generations, and smart acceleration enabled by Coherent Accelerator Processor Interface (CAPI) technologies, POWER9 solutions are an ideal platform for in-memory and data-centric applications and deliver industry-leading price performance for your mission-critical workloads.

Designed to run commercial, cognitive and database workload better than any other competitive Server Platform, customers are trusting POWER9 Servers as the robust and secure backbone of their IT infrastructure

Director of Cloud and Managed Services at BIOS IT Glenn Rosenberg comments, "Providing the most capable solutions to ensure our customers gain real value, requires focussed collaborations with world-renowned technology partners. We are very excited to now include industry innovators IBM in our partner ecosystem".

Learn more about what the new enhanced core and POWER9 processor chip architecture can do for your business by contacting BIOS IT today. See the full range of IBM POWER9 solutions here (<https://www.bios-it.co.uk/partnerfocus/ibm.aspx>).

About BIOS IT

BIOS IT is a global design house, systems builder and integrated solution provider for enterprise performance computing. We construct bespoke clusters and appliances by handpicking the best components and newest technologies based on specific customer goals. We support well-known organisations at the top of their research fields, across science, engineering, academia and finance disciplines. Our comprehensive range of products and services include high-performance enterprise servers, storage and networking, on-premise or in the cloud, with associated services, support, hosting and software.
