Friday, 24 July 2020

London, United Kingdom (July 24, 2020) — ViewSonic (<https://www.viewsonic.com/uk/>) Corp., a leading global provider of visual solutions, today announces the launch of myViewBoard Classroom (<https://myviewboard.com/products/classroom/>). As an online browser-based education platform within the myViewBoard ecosystem, myViewBoard Classroom is a purpose-built solution designed with the teacher in mind first, rather than technology lead philosophy to assist educators in this new era of hybrid learning. The launch of myViewBoard Classroom comes as schools grapple with reopening schools and what that new reality will look like. Whether educators are in the classroom, teaching from home, or reaching students via a combination of both methods, hybrid learning techniques will continue to play an essential role given the “new normal” in education.

“The pandemic has forever changed our world and affected all aspects of our lives. In education, teachers are oscillating between virtual and physical classrooms. However, the tools they used for distance learning at the beginning of the school closures are often not transferable to the physical classroom when on-site learning is required,” said Craig Scott, CTO at ViewSonic. “We have made it our mission to develop a hybrid teaching tool that provides a seamless transition between the physical and virtual spaces and offers teachers the capabilities to continue inspiring their students with engaging lessons regardless of location.”

myViewBoard Classroom is a collaborative tool for delivering education content that enables visual learning, and participation for a full class, individuals, or groups of students. It is ideal for traditional front of class teaching, flipped classrooms, blended teaching pedagogy, and online learning. With the ability to conduct group collaboration, manage a virtual classroom with video conferencing tools, and secure user participation, myViewBoard Classroom provides an engaging and collaborative learning environment.

myViewBoard Classroom comes complete with a digital whiteboard canvas, to prepare and present content in real-time. Teachers control when students can ask questions, or make comments, as well as manage who may display their screens to the class for presentations. Student participation is encouraged via the Hand Raise push-to-talk feature and student access to remote writing tools. Independent breakout group discussions are made possible with virtual grouping, allowing real-time annotation and quizzes. Additionally, a low bandwidth feature ensures functions perform well, even when the Internet connection is weak.

In a show of support for schools during the initial outbreak, ViewSonic provides myViewBoard free-of-charge to Primary and Secondary schools, colleges and universities as of March 2020. After receiving positive feedback from schools and educators, ViewSonic decided to make myViewBoard Entity for education complimentary to all education institutions permanently*.
