

Architects using Virtual Reality (VR) technology

Submitted by: Urbanist Architecture Ltd

Thursday, 27 July 2017

Do YOU want to be one of the FIRST people to visit your home before it's been built?

Urbanist Architecture will be one of the first architectural firms in London to employ the latest Virtual Reality (VR) technology in their projects.

(<https://urbanistarchitecture.co.uk/urbanist-4d-reality-virtual-reality-technology-in-architectural-design/>)

Architects at Urbanist Architecture are now using sophisticated VR gadgets which include VR headsets, drones and bespoke software to create accurate simulations. This technology will not only show their clients what their final design will look like – it puts them right in the middle of it.

You can see how every wall affects the flow of the property in 360 degrees, how every finish increases the feeling of quality.

It enables architects to give you a precision view of what they are working on for you. This immersive experience gives people who want to renovate their house more control over their project than ever before.

The use of new technologies within the building industry has continued to increase over the years, and the arrival of the Urbanist 4D Reality is set to be a real game changer for the world of architecture and property development.

About:

Urbanist Architecture is a London based architecture company that specializes in creating inspiring contemporary home renovations, extensions and new build houses and flats.
