

# Zen achieves AWS Service Delivery Designation for Amazon EC2 for Windows Server

Submitted by: Zen Internet Ltd

Monday, 16 April 2018

---

DATELINE - Zen recently announced that it has achieved the Amazon Web Services (AWS) Service Delivery designation for Amazon Elastic Cloud Compute (EC2) for Windows Server, recognising that the business reduces customer deployment efforts by identifying the most appropriate configuration from cost, performance, security, reliability and management perspectives for their Windows-based applications.

Achieving the Amazon EC2 for Windows Server designation differentiates Zen as an AWS Partner Network (APN) member that provides specialised demonstrated technical proficiency and proven customer success in delivering Amazon EC2 for Windows Server. To receive the designation, APN Partners must possess deep AWS expertise and deliver solutions seamlessly on AWS.

“Zen is proud to be an Amazon EC2 for Windows Server Partner,” said John Lyons, Zen’s head of cloud and hosting. “Over the past five years, we’ve focused on designing, building and deploying Microsoft workloads on AWS, helping businesses to utilise the agility, breadth of services and pace of innovation that AWS provides.”

AWS is enabling scalable, flexible and cost-effective solutions from startups to global enterprises. To support the seamless integration and deployment of these solutions, AWS established the AWS Service Delivery Program to help customers identify APN Consulting Partners with deep expertise in delivering specific AWS services.

Zen’s accredited architects and engineers are experts in helping businesses to migrate their Microsoft workloads to AWS, designing, managing and continuously evolving highly scalable, secure and dynamic environments for applications running on Windows Server.
